IDENTIFIERS	CETEM, *Comprehensive Elementary Teacher Education Models

ABSTRACT

The two sections of volume 2 of the Georgia feasibility study on elementary teacher education are intended for readers who wish for a detailed analysis of the study's activities and findings. The first section contains detailed PERT charts for the 5-year development strategy, activity lists, and the time data and time reports. The second section contains cost data and cost reports. Related documents are SP 004 171, the general report, and SP 004 182, job descriptions for the program. (MBM)

EDRS NOTE.....

PORTIONS OF THE TEXT OF THIS DOCUMENT ARE VERY SMALL PRINT AND OF POOR CONTRAST. THIS PROBLEM IS ONE OF ORIGINAL INPUT TEXT AND NOT ONE OF REPRODUCTION.

PREFACE

This is the second volume of the final report of the feasibility study. The titles of the volumes in order are:

Volume I	Basic Report
Volume II	Technical Report
Volume III	Job Descriptions

The technical report is designed for readers who wish to extend beyond the basic report into a more detailed analysis of the feasibility study activities and findings. Contained herein are the detailed PERT charts for the five year development strategy and input data and output reports for the IBM Project Management System/360 used in this study. For convenience in handling, the initial edition was divided into two parts whose pages are numbered consecutively. Volume IIA presents the PERT charts, activity lists, and the time data and time reports. Volume IIB presents cost data and reports.

Although all members of the investigating staff made contributions to the preparation of this volume, primary acknowledgement for the preparation of the technical material is directed to Mr. Jim B. Grant and Mr. Gunter Zietlow, Systems Engineers. Acknowledgement for organization of the volume and much of the descriptive information is directed to Dr. Jerry B. Ayers, Associate Director for Organization and Management. Other contributors were: Dr. Jerold P. Bauch, Associate Director for Evaluation, Dr. Michael L. Hawkins, Associate Director for Instruction, Dr. Charles E. Johnson, Project Director and Dr. Gilbert F. Shearron, Director of Implementation, and Chairman, Division of Elementary Education.

CONTENTS OF VOLUME TWO A

		Page
Part One:	PERT Network Diagrams and Activity List	1
	PERT Network Diagrams	3
	Activity List	26
Part Two:	PERT Time (Network Processor)	57
	Section A: PERT Time Data	59
	Job Control Language for Network Processor	59
	Activity Time Cards	59
	Time Calendar	63
	Input Data Cards	65
	Section B: Activity Time Status Reports	137
	Activity Time Status Report Sorted By: Predecessor-Successor	139
	Activity Time Status Report Sorted By: Expected Date	165
	Activity Time Status Report Sorted By: Slack (Critical Path List)	191

CONTENTS OF VOLUME TWO B

Part Three:	PERT Cost (Cost Processor)	217
	Section A: PERT Cost Data	219
	Job Control Language for Cost Processor	219
	Work Breakdown Structure	219
	Organizational Analysis Table	222
	Cost Category Codes	222
	Activity Cost Cards	228

PART ONE

PERT Network Diagrams and Activity List

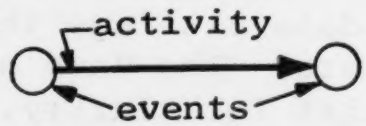
The nine figures which appear in this section of the technical report are the result of the application of one management technique called network diagraming. This technique is a part of advances in management technology which have been developed in recent years.

For the uninitiated in this technique, some further explanation is in order. Network diagraming is also known as Critical Path Method (CPM), and Program Evaluation and Review Techniques (PERT). PERT grew out of the research and development of the Polaris missile system while CPM derives from project management problems in industry. While there are differences in their conceptualization and utilization, over the last 10 years a body of knowledge which encompasses the best of both CPM and PERT has evolved. The rules and terminology used for designing and reporting program networks here have been taken from two outstanding references, Program Evaluation and Review Technique Applications in Education (Cook, 1966) and Project Management with CPM and PERT (Moder & Phillips, 1964).

The function of network diagraming is to visually display the results of the planning process. This planning can occur on any desired level of detail and is a key to guiding an intricate project to completion.

The basic premise for the application of PERT and CPM here is that the process of educating an elementary school teacher can be broken down into discrete parts and these parts can be analyzed, planned, developed, and have resource estimations made for them.

In the networks shown, the discrete units for planning are called activities and are represented by arrows. All activities have definable beginning and ending points. These points are represented by a circle on the network and are called events.



In conventional practice the event to the left of the activity is called the predecessor event while the one to the right of the activity is called the successor event. When two or more activities end at an event it is called a merge event. If two or more activities leave the same event it is a burst event. A network is formed by the combination of many activities and events drawn to show their interrelationships.

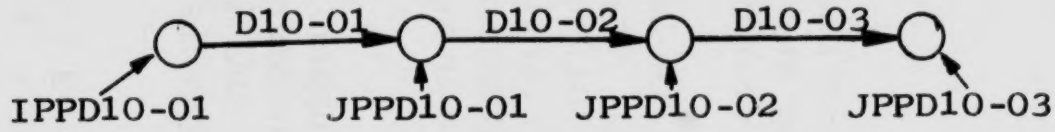
In any network the activities and events are given appropriate names and/or numbers to distinguish them for analysis. With the exception that there are certain conventions to be followed, the method of naming activities and events can suit the purpose of the application.

The network diagrams shown in the nine figures of this section are graphic representations of the preparation phase (PP), preprofessional phase (PE), professional phase (PO), inservice (specialist) phase (IN) and overall management component of the model program. It was decided that abbreviations for the program units should appear in activity and event names. In addition, within each unit there can occur subdivisions such as development, testing (piloting), initial operation, and operation. The first letters of each of these then also appear in activity and event names.

Based on these requirements, each activity was given an eight character name. It is referred to as either the activity number or charge number. The following is an example of an activity number: PPD10-01. The first two characters tell the phase or component of which this activity is a part (PP or preparation phase). The third character tells in which portion of the phase or component the activity is occurring (D or development). The last five units give the activity a unique number (10-01) and enables the activity to be located on the networks or in the activity lists. The attentive reader may notice that in the network and activity list a dash appears as the sixth character in the activity number while in all computer reports and data listings this dash has been replaced with the numeral zero. The dash was used in the networks and the activity list for clarity. On the network diagram for any phase or component the first two characters of the activity name were deleted. The activity described

previously would appear as follows: D10-01. Space limitations on the drawings made this format necessary.

Each activity has associated with it a predecessor event and a successor event. These are called the I and J events respectively. Event names are formed by the combination of an I or J plus the activity name associated with the event. When activities are connected together the successor event of one activity becomes the predecessor event of the next activity. To avoid confusion a convention is necessary for choosing the appropriate name for an event. The example below will illustrate this convention.



For any given activity the predecessor event name is the previous activity's successor event name. For this same activity the successor event is formed by the letter J and the activity name. If an activity is not preceded by another activity its predecessor event name is formed by the letter I plus the activity name.

Exceptions to these rules occur at merge events, burst events and interphase points. In these situations the events could take on various names. However, in such cases one name is chosen arbitrarily and is written beside the event. Dummy activities are indicated by dotted lines. These are used to show dependency relationships when no actual activity exists.

Following the nine figures in this section is a complete list of the activities of the model program. The activity numbers are the reference numbers for the time and cost reports and diagrams.

Preparation Phase
"PP"

This figure shows the network diagram of the preparation phase of the model program. Beginning with event IPPD01-01 the activities proceed through several burst and merge constructions which lead to and move from four major coordinating activities.

Initially, all components of the model program undergo revision based on additional information obtained since their original conception. These activities bursting from the start event IPPD01-01 are labeled D15-XX (e.g. D15-02). After revision the evaluation oriented components have their evaluation criteria revised. For all other components their procedures are drafted and their evaluation criteria are revised. Those components for which procedures are drafted then merge at activity D15-58 (Coordinate and revise all drafted procedures).

Bursting from D15-58 are two sets of activities. The upper set, D09's and D11's, is concerned with developing evaluation procedures. The procedures are designed and drafted in these activities. After designing and drafting, the activities then merge to activity D15-59 for coordination and revision. Following this, the drafted evaluation procedures are tested.

In the lower set of activities, T09's and T13's, bursting from D15-58, the component procedures drafted prior to activity D15-58 are tested. Following the testing activities is activity T15-01 (Coordinate and revise all tested procedures).

Activity T15-01, one end point of the PP phase, interphases with the preprofessional phase (PE) at event IPED01-02 which precedes the development of 11 PM groups. The procedures which were tested prior to activity T15-01 are to be utilized in this PM development. Similarly, the second end point of the PP phase, activity T15-02, interphases at JPEN19-01 prior to the utilization of the procedures revised during activity T15-02. These interphase lines can be seen in Figure 9.

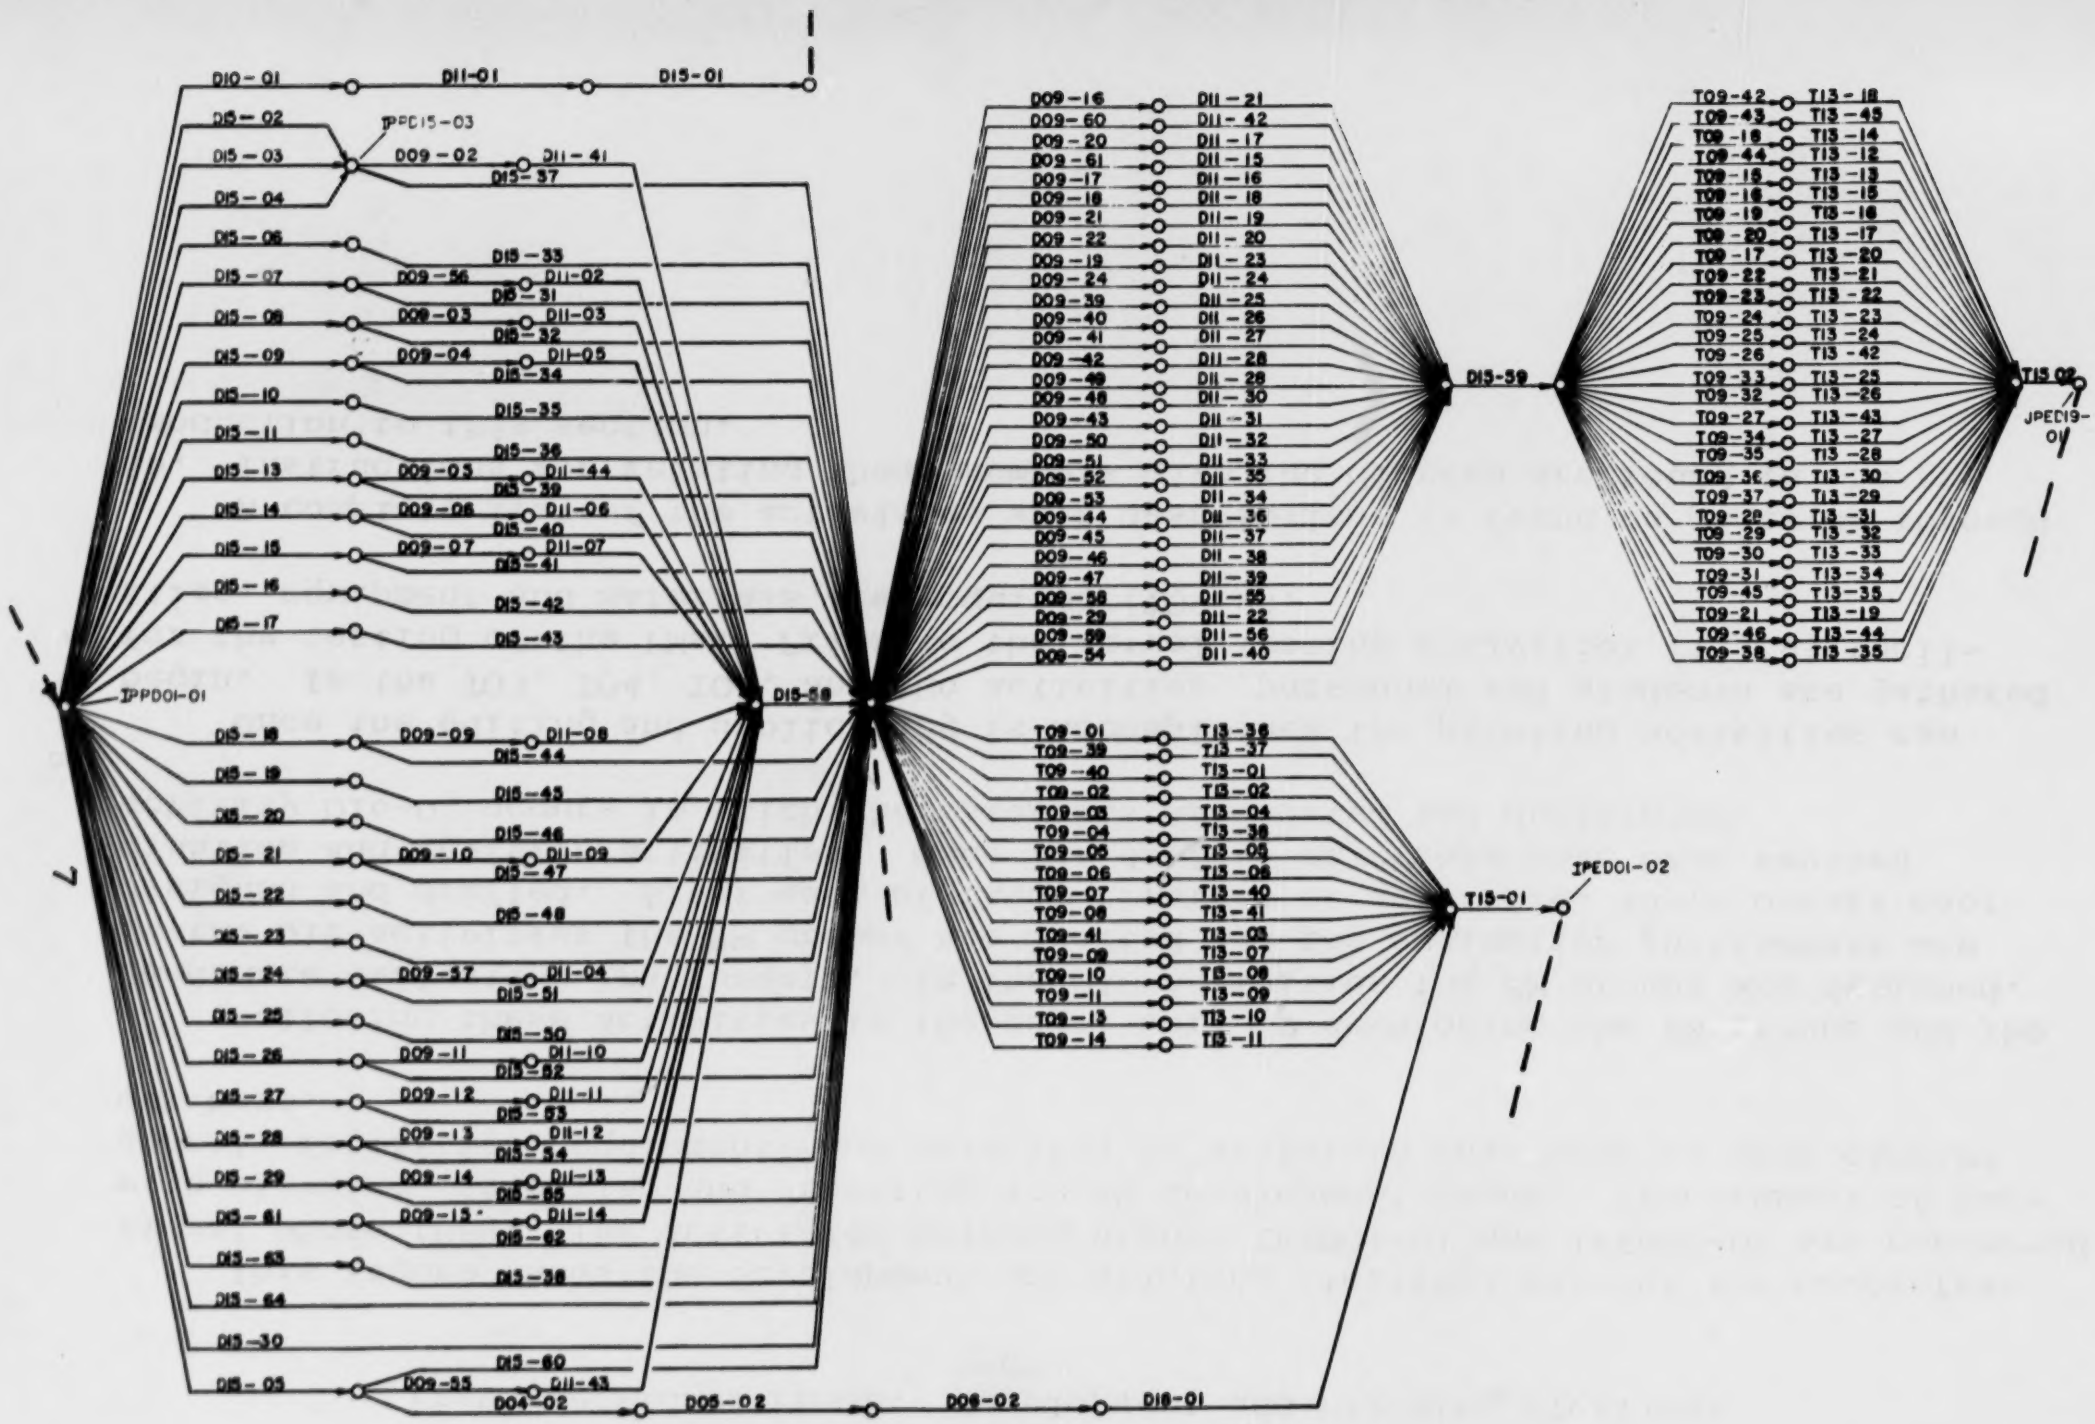


Fig. 1. PERT network: Preparation phase (PP).

Preprofessional Phase: Development and Piloting (Testing) "PE"

This figure shows the development and piloting (testing) part of the preprofessional phase (PE). The activities between events IPEDO1-01 and IPEDO1-02 are concerned with planning, selecting and orienting the PM development teams. Procurement of personnel, facilities, equipment, and materials to assist in this work is also carried out here.

Following these activities is the major work of developing the PM groups and the candidate evalustion instruments. In the D10 activities the PM groups are designed. In the D11 activities the PM groups are drafted and the evaluation instruments are designed and drafted. After each of these clusters of activities there occurs coordination and revision activities. Once the drafted materials have been revised activity D16-01 occurs in which the materials are edited and duplicated.

Once the editing and duplicating is accomplished the piloting activities can begin. In the TO3, TO4, TO5, and TO6 activities, personnel and students are gathered for the testing of the PMs. Prior to the actual testing activities (T13's) facilities, equipment and materials are acquired (TO9's).

A complete list of the activities with descriptions is found on pages 26 through 56. Instructions for relating these numbers with the diagram are found in the introduction to this section.

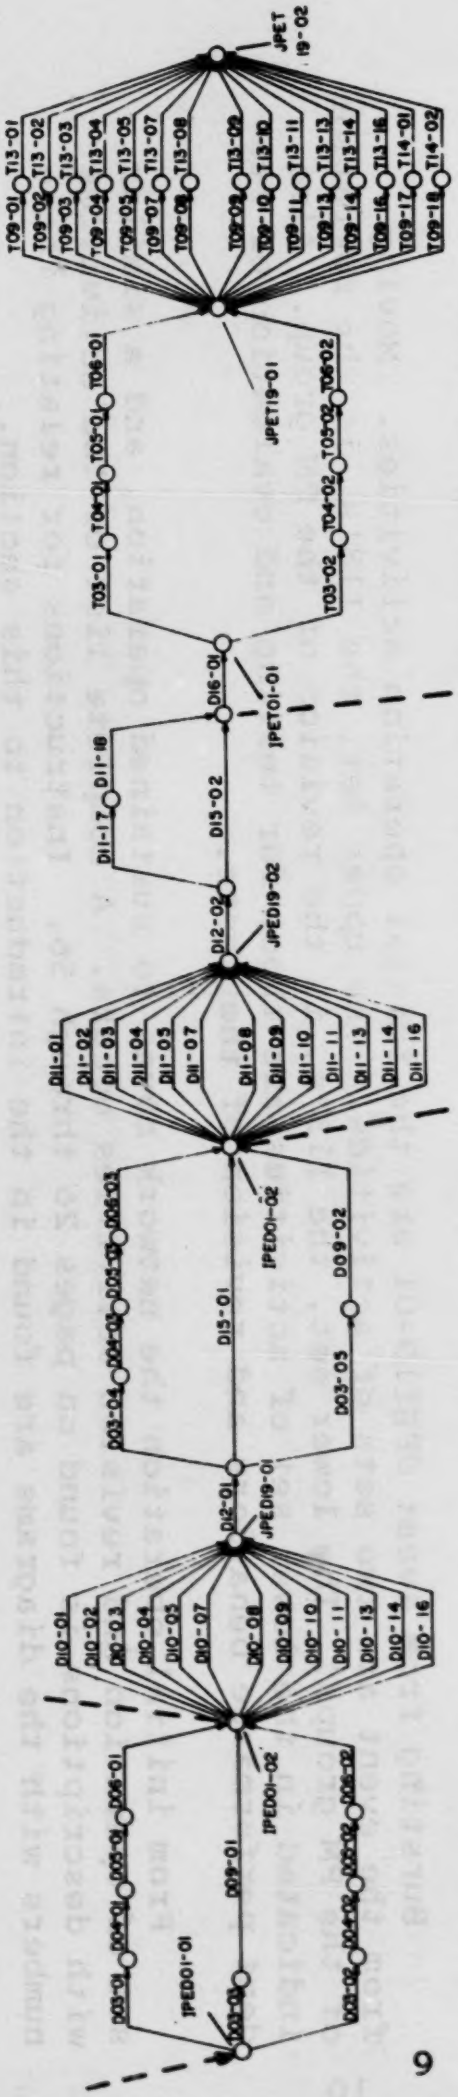

Fig. 2. PERT network: Preprofessional phase (PE)--development and piloting (testing).

Preprofessional Phase: Initial and Sustained Operation "PE"

This figure shows the continuation of the PE phase with initial and sustained operation. Two of the first activities shown, T12-01 and T15-01, are concerned with coordination and revision of the previously tested PM groups.

Bursting from event JPET19-03 is a cluster of activities dealing with the planning and procuring of personnel, facilities, equipment, and materials for each of the PM groups. Having started earlier but continuing through the planning and procuring activities mentioned above is a group of activities in which planning, selecting, organizing and orienting personnel and students for initial operation occurs.

Bursting from event JPEI19-01 are the initial operation activities. Moving from the event are two sets of activities. The upper set, the I18's, is the operation of the PM groups. The lower set, the I15's, is the revision of the PM group. Also indicated in the lower set of activities are those for testing and evaluation of student performance behaviors and revision of the tests.

From initial operation the network moves to sustained operation, and a similar set of operation and revision activities occurs. A complete list of the activities with descriptions is found on pages 26 through 56. Instructions for relating these numbers with the diagrams are found in the introduction to this section.

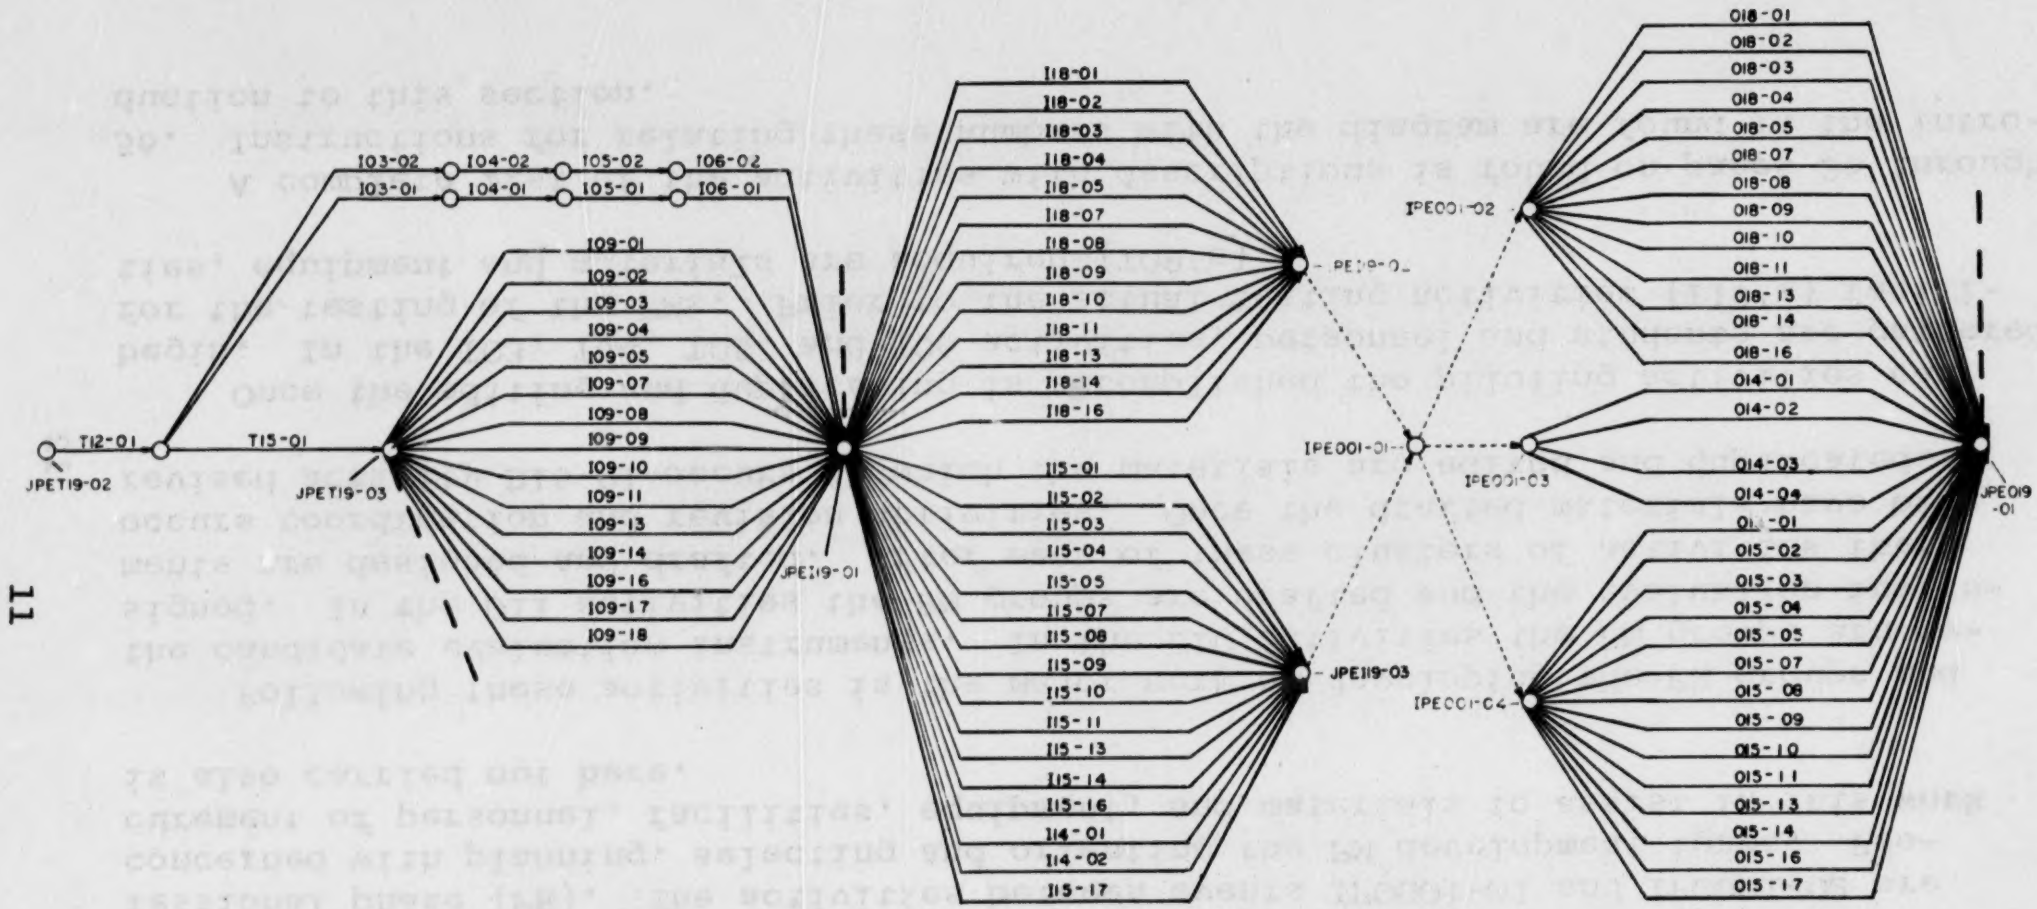

Fig. 3. PERT network: Preprofessional phase (PE)--initial and sustained operation.

Professional Phase: Development and Piloting (Testing) "PO"

This figure shows the development and piloting (testing) part of the preprofessional phase (PE). The activities between events IPODO1-O1 and IPODO1-02 are concerned with planning, selecting and orienting the PM development teams. Procurement of personnel, facilities, equipment, and materials to assist in this work is also carried out here.

Following these activities is the major work of developing the PM groups and the candidate evaluation instruments. In the D1O activities the PM groups are designed. In the D11 activities the PM groups are drafted and the evaluation instruments are designed and drafted. After each of these clusters of activities there occurs coordination and revision activities. Once the drafted materials have been revised activity D16-O1 occurs in which the materials are edited and duplicated.

Once the editing and duplicating is accomplished the piloting activities can begin. In the T03, T04, T05, and T06 activities, personnel and students are gathered for the testing of the PMs. Prior to the actual testing activities (T13's) facilities, equipment and materials are acquired (T09's).

A complete list of the activities with descriptions is found on pages 26 through 56. Instructions for relating these numbers with the diagram are found in the introduction to this section.

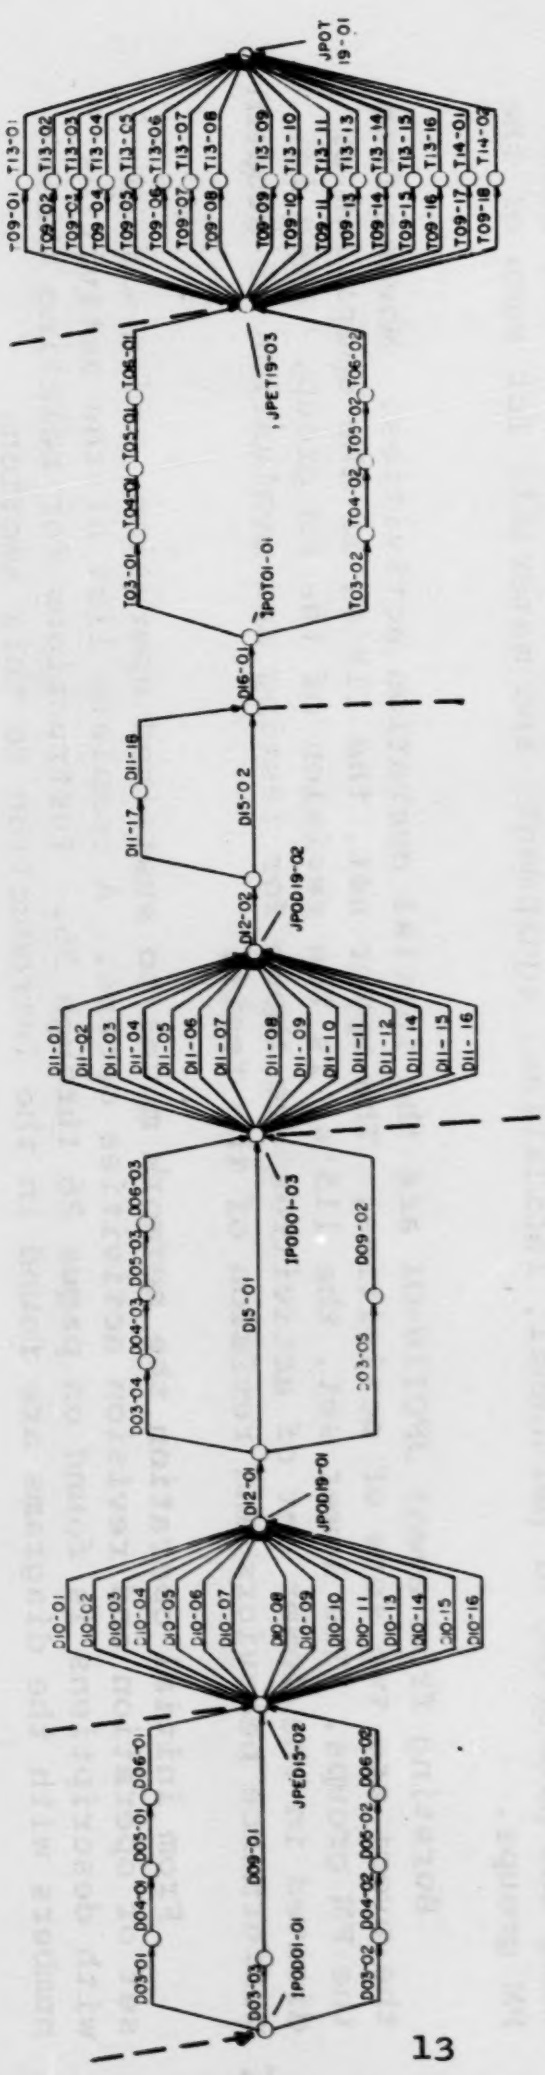

Fig. 4. PERT network: Professional phase (PO)--development and piloting (testing).

Professional Phase: Initial and Sustained Operation
"PO"

This figure shows the continuation of the PE phase with initial and sustained operation. Two of the first activities shown, T12-01 and T15-01, are concerned with coordination and revision of the previously tested PM groups.

Bursting from event JPOT19-03 is a cluster of activities dealing with the planning and procuring of personnel, facilities, equipment, and materials for each of the PM groups.

Bursting from event JPOI19-01 are the initial operation activities. Moving from the event are two sets of activities. The upper set, the I18's, is the operation of the PM groups. The lower set, the I15's, is the revision of the PM group. Also indicated in the lower set of activities are those for testing and evaluation of student performance behaviors and revision of the tests.

From initial operation the network moves to sustained operation, and a similar set of operation and revision activities occurs. A complete list of the activities with descriptions is found on pages 26 through 56. Instructions for relating these numbers with the diagrams are found in the introduction to this section.

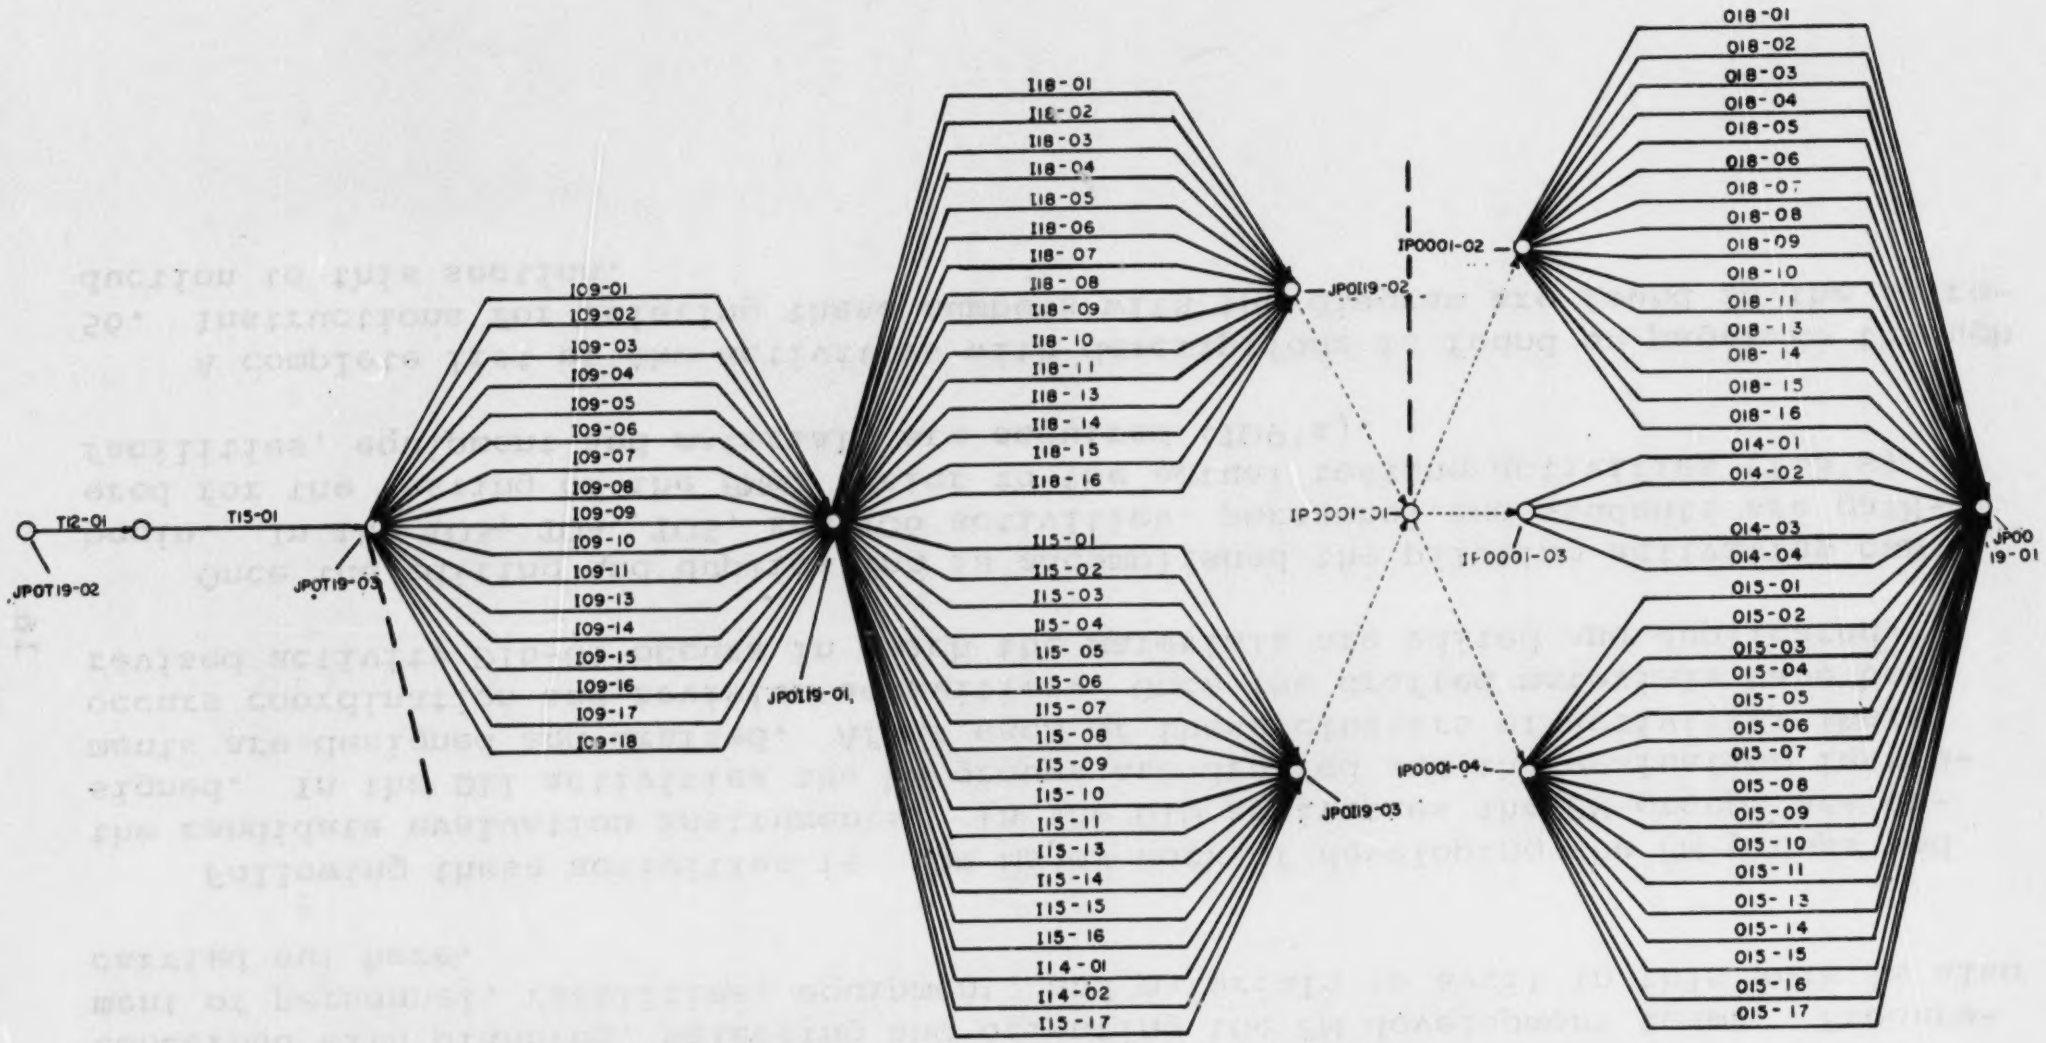

Fig. 5. PERT network: Professional phase (PO)--initial and sustained operation.

Specialist Phase: Development and Piloting (Testing)
"IN"

This figure shows the development and piloting (testing) part of the preprofessional phase (PE). The activities between events IINDO1-01 and IINDO1-02 are concerned with planning, selecting and orienting the PM development teams. Procurement of personnel, facilities, equipment, and materials to assit in this work is also carried out here.

Following these activities is the major work of developing the PM groups and the candidate evaluation instruments. In the D10 activities the PM groups are designed. In the D11 activities the PM groups are drafted and the evaluation instruments are designed and drafted. After each of these clusters of activities there occurs coordination and revision activities. Once the drafted materials have been revised activity D16-01 occurs in which the materials are edited and duplicated.

Once the editing and duplicating is accomplished the piloting activities can begin. In the TO3, TO4, TO5, and TO6 activities, personnel and students are gathered for the testing of the PMs. Prior to the actual testing activities (T13's) facilities, equipment and materials are acquired (TO9's).

A complete list of the activities with descriptions is found on pages 26 through 56. Instructions for relating these numbers with the diagram are found in the introduction to this section.

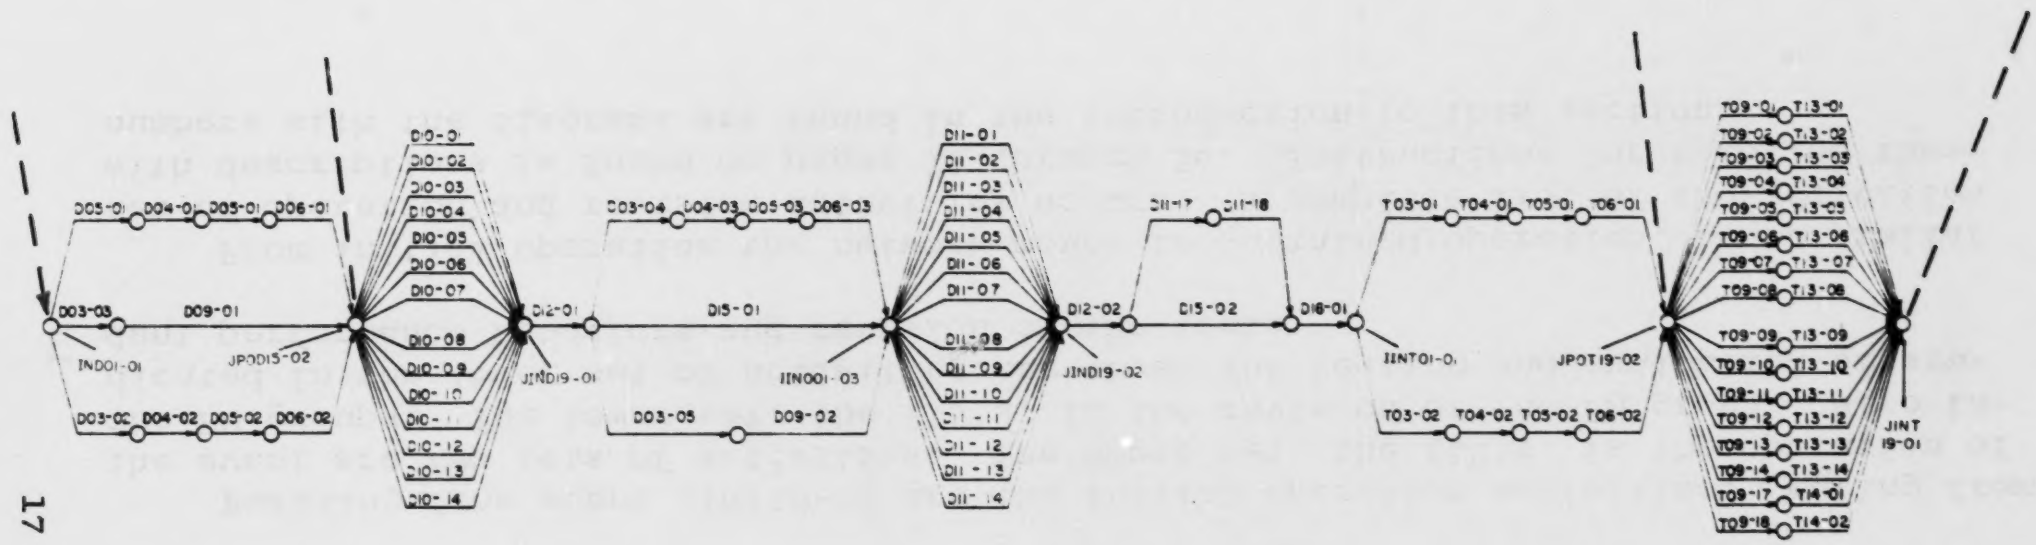

Fig. 6. PERT network: Specialist phase (IN)--development and piloting (testing).

Specialist Phase: Initial and Sustained Operation "IN"

This figure shows the continuation of the PE phase with initial and sustained operation. Two of the first activities shown, T12-01 and T15-01, are concerned with coordination and revision of the previously tested PM groups.

Bursting from event JINT19-03 is a cluster of activities dealing with the planning and procuring of personnel, facilities, equipment, and materials for each of the PM groups.

Bursting from event JINI19-01 are the initial operation activities. Moving from the event are two sets of activities. The upper set, the I18's, is the operation of the PM groups. The lower set, the I15's, is the revision of the PM group. Also indicated in the lower set of activities are those for testing and evaluation of student performance behaviors and revision of the tests.

From initial operation the network moves to sustained operation, and a similar set of operation and revision activities occurs. A complete list of the activities with descriptions is found on pages 26 through 56. Instructions for relating these numbers with the diagrams are found in the introduction to this section.

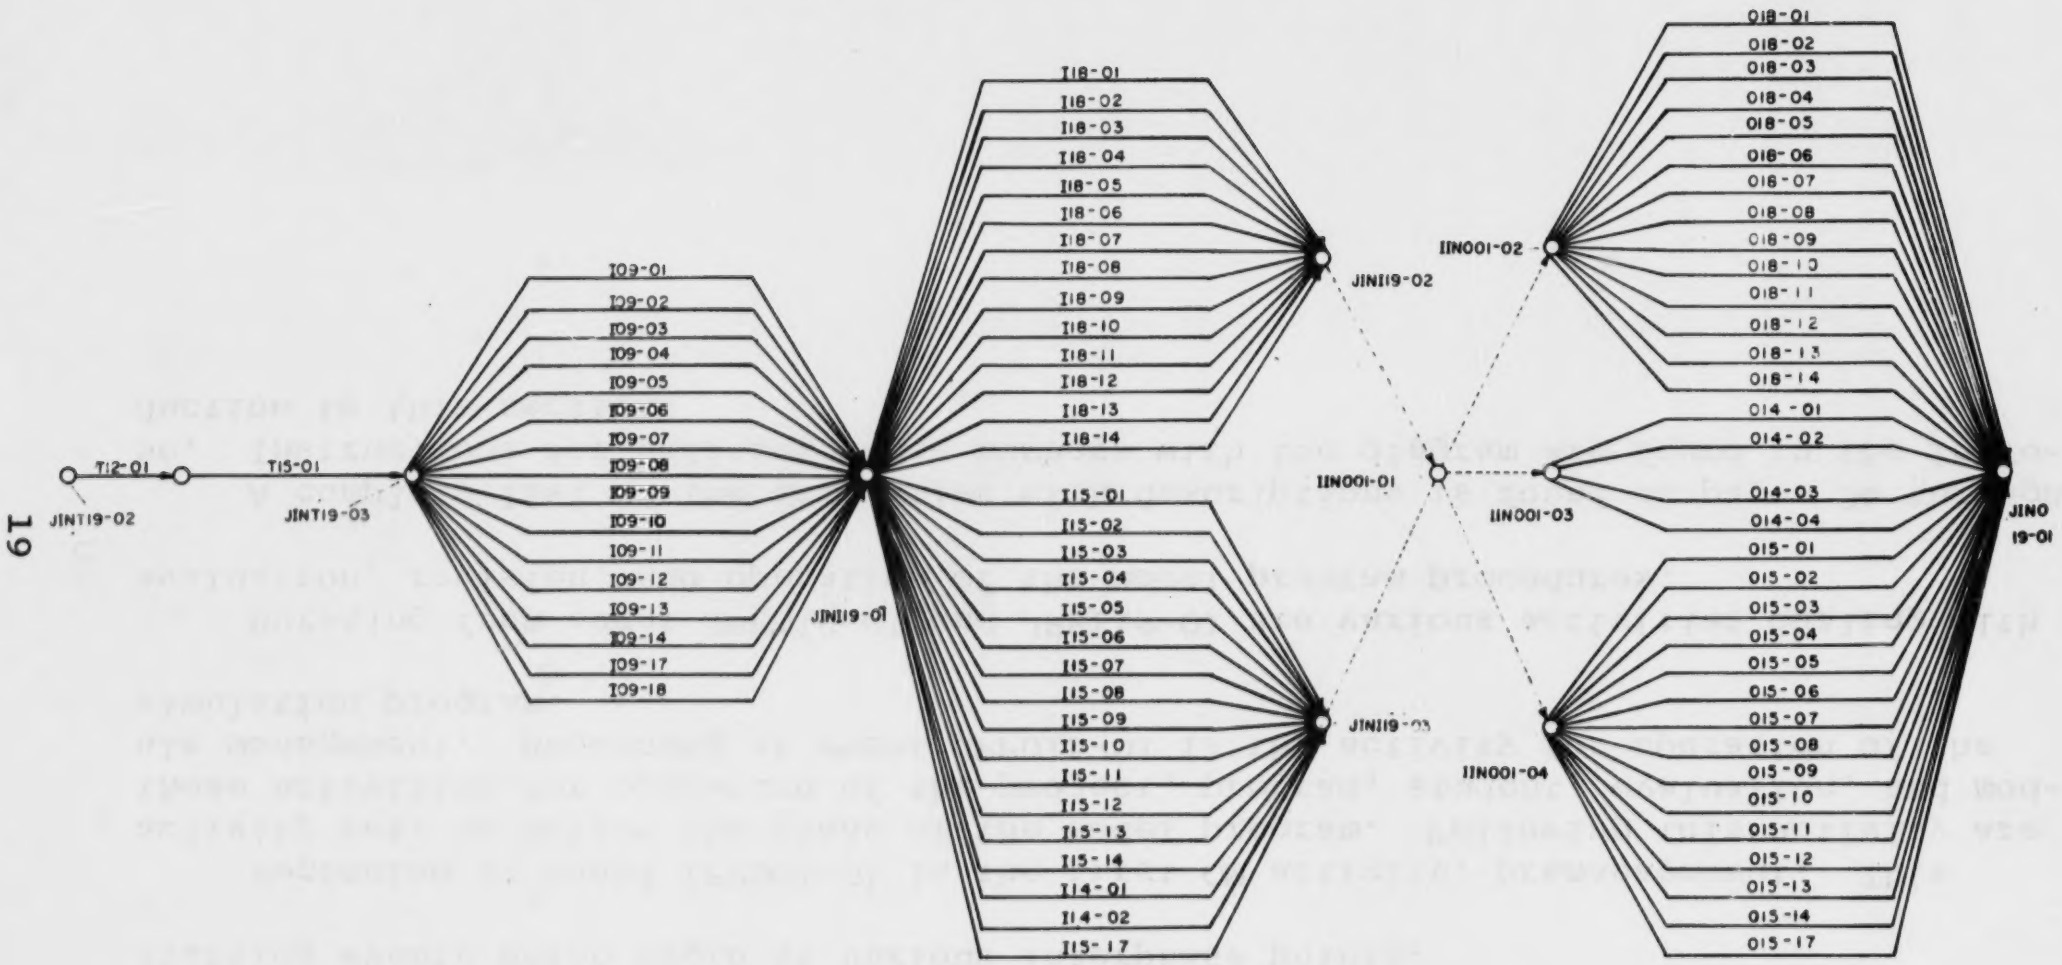

Fig. 7. PERT network: Specialist phase (IN)--initial and sustained operation.

Overall Management
"OM"

This figure is the network diagram of the overall management component of the model program. Unlike the previous seven figures the overall management component covers the entire five year period of the model program. The component has four starting events which begin at various interphase points.

Beginning at event IPPD01-01 is the first OM activity, premanagement. This activity sets in motion the plans of the model program. Following this activity are those activities for operation of the project, program, student, evaluation, and module management. Beginning at event JPPD15-01 is the activity for operation of the simulation program.

Bursting from event JPED19-01 and JPEI19-01 are various activities dealing with evaluation, revision, and operation of the model program procedures.

A complete list of the activities with descriptions is found on pages 26 through 56. Instructions for relating these numbers with the diagram are found in the introduction to this section.

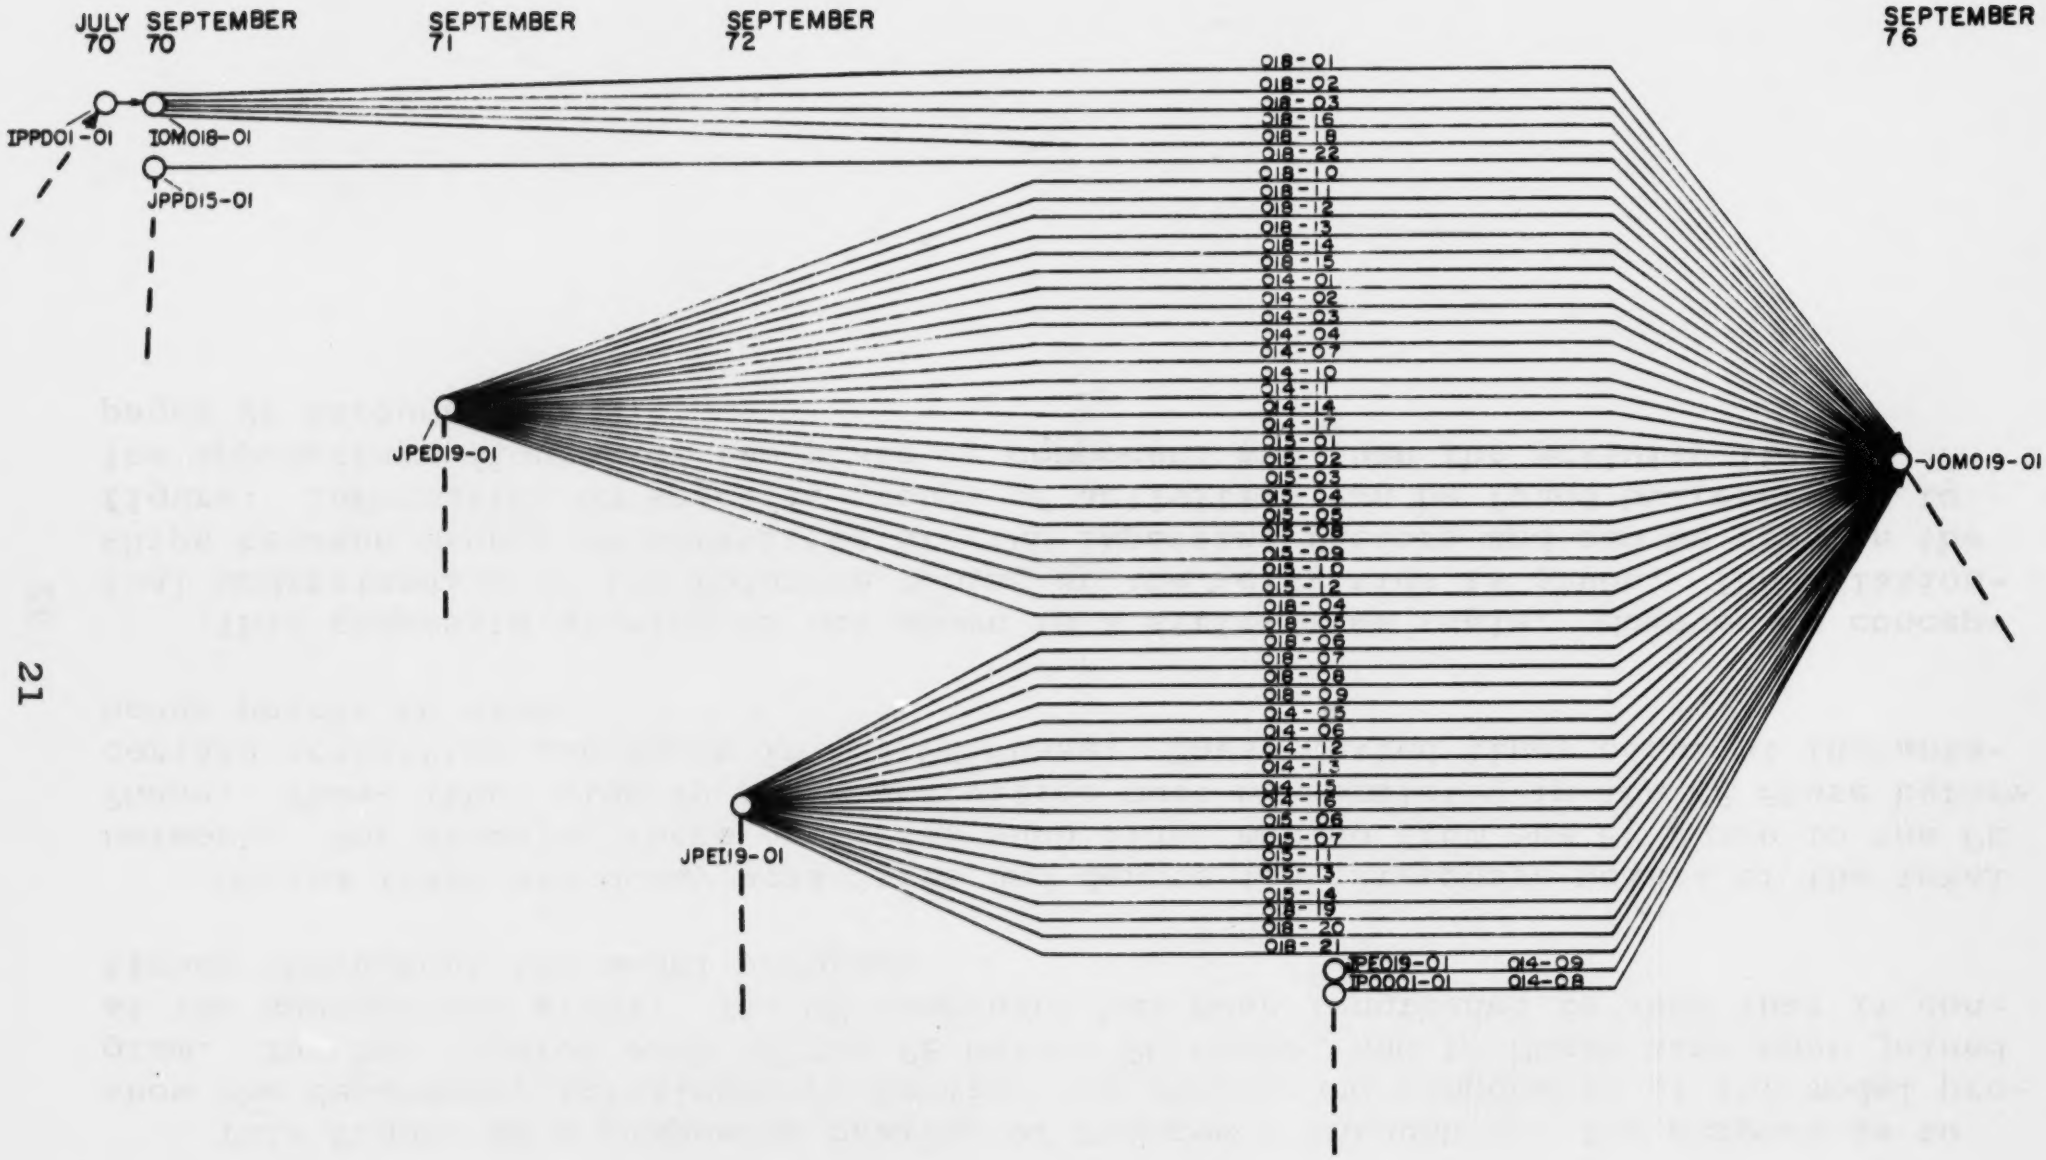

Fig. 8. PERT network: Overall management (OM).

Model Program--All Phases

This figure is a composite drawing of Figures I through 8. Its purpose is to show the dependency relationships between the phases and components of the model program. The two figures each of the PE Phase, PO Phase, and IN Phase have been joined at the appropriate event. The OM component has been lengthened to show that it continues throughout the model program.

Dotted lines are dummy activities and denote the interphase points of the total network. For example, there are three such lines moving from the PP Phase to the PE Phase. These lines signify which activities must be completed in the PP Phase before certain activities can begin in the PE Phase. These dotted lines occur at instantaneous points in time.

This composite drawing is not shown to a strict time scale. However, a conceptual understanding of the relative timing of the activities is given. The relationships between groups of activities are the important factors and can be seen in the figure. Information on specific groups of activities can be found by referring to the appropriate figure for the phase or component and then the activity list on pages 26 through 56.

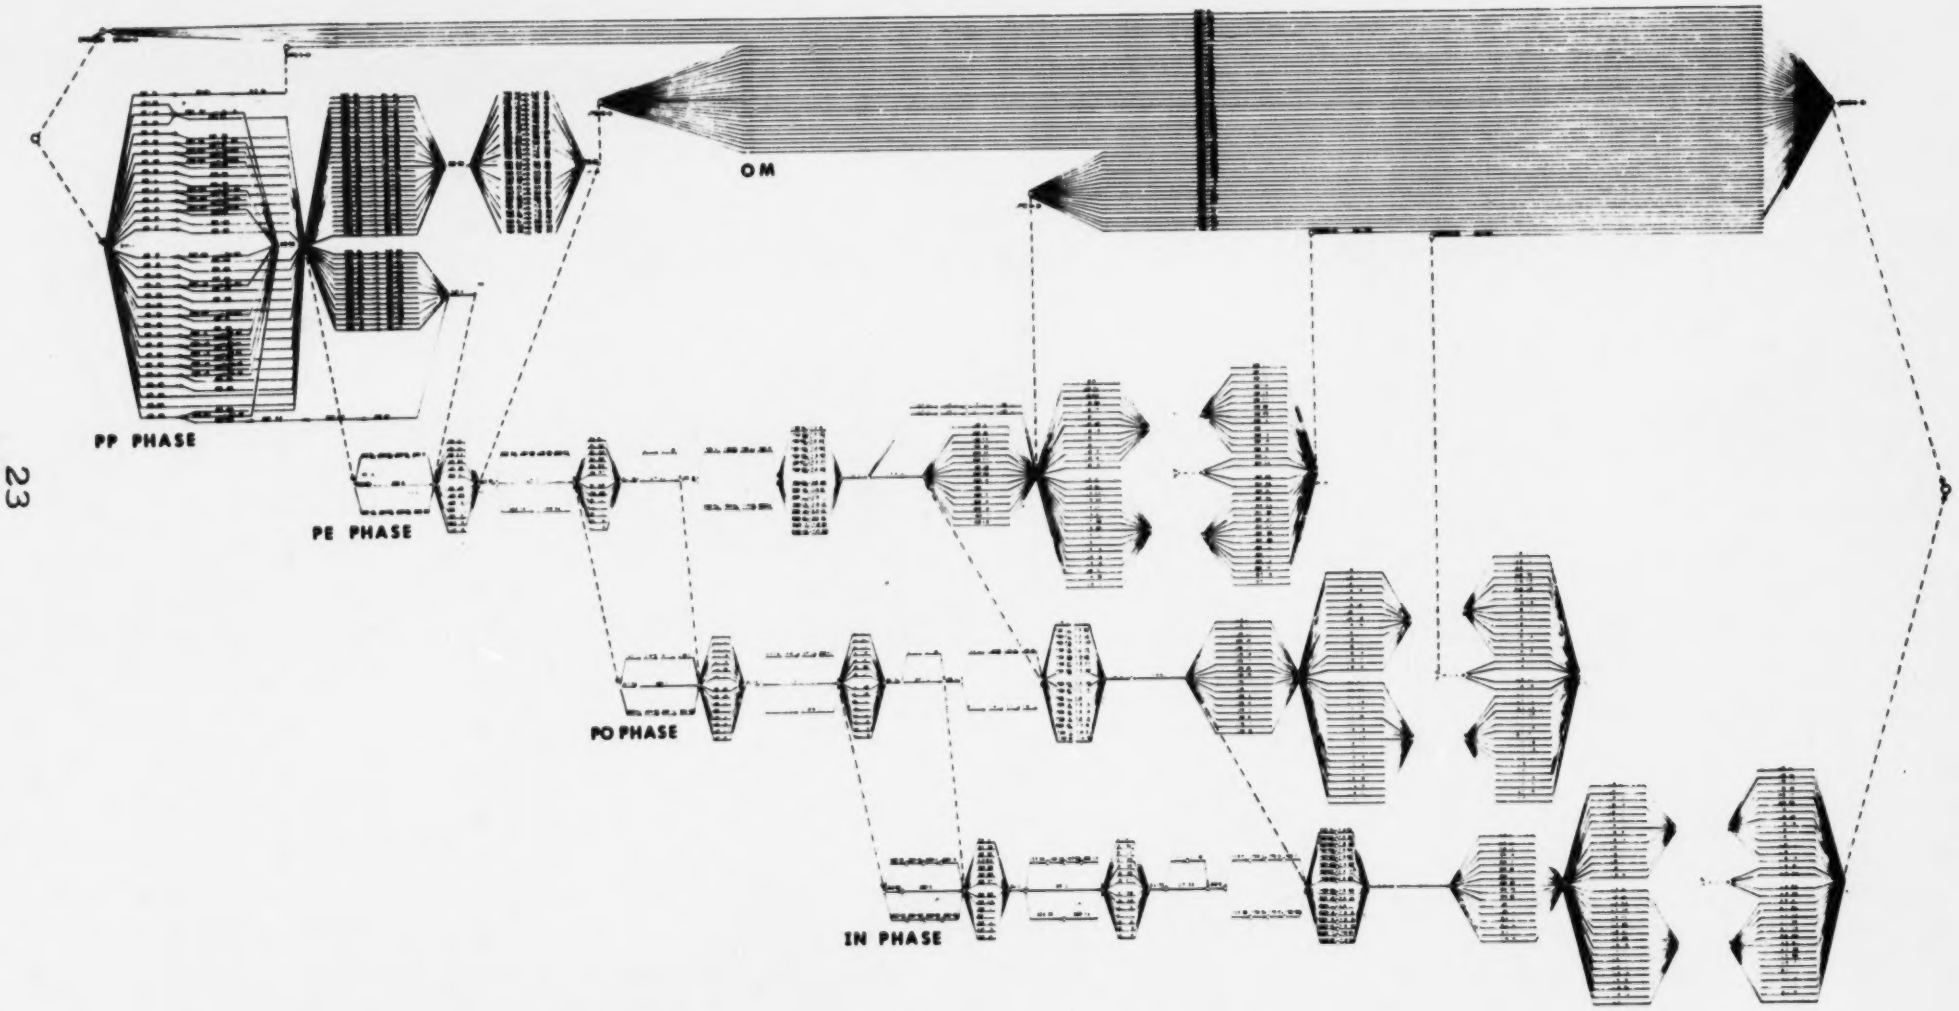

Fig. 9. PERT network: Model program--all phases.

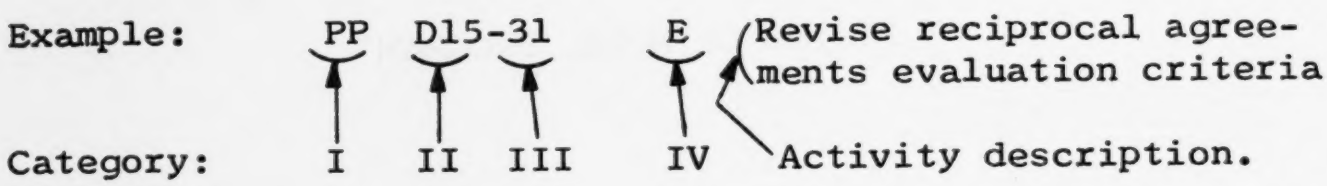
ACTIVITY LIST FOR FIVE YEAR DEVELOPMENT

PERIOD OF MODEL PROGRAM

Activity List for Five Year Development Period of Model Program

In the following pages (28-56) are contained a complete list of the activities for the five year development period of the model program. These activities correspond to those presented on the PERT network charts presented in the previous section. Following is a sample activity and the explanation of all symbols used in the activity list.



Category I:
- OM - overall management level
- PP - preparation and design level
- PE - preprofessional level
- PO - professional level
- IN - specialist level

Category II:
- D - development phase
- T - piloting phase
- I - initial operation phase
- O - sustained operation phase

01 - beginning	11 - draft
03 - planning	12 - coordination
04 - selection	13 - pilot and testing
05 - organization	14 - evaluation
06 - orientation	15 - revision
09 - procurement	16 - editing
10 - design	18 - operation

Category III: Activity sub-number. A unique one or two digit number assigned to each activity.

Category IV: Sybsystem.
- M - management
- E - evaluation
- I - instruction

Activity description. A unique description of each activity.

Proficiency module groups have been assigned a number for convenience of computer operations. The numbering system is as follows:

PM Group Number	PM Group Name
1	Language Arts
2	Social Science
3	Natural Science
4	Mathematics
5	Fine Arts
6	Foreign Languages
7	Health Education
8	Human Growth and Development
9	Pupil Personnel Services
10	Instructional Media
11	Professional Development and Curriculum
12	School Community Coordination
13	Evaluation
14	Social Foundation
15	Internship
16	Practicum Field Experience

Activity No.	Subsystem	Activity Description
PP D04-02	M	Select "target groups"
05-02	M	Organize "target groups"
06-02	M	Orient "target groups"
		Plan and procure personnel, facilities, equipment, material:
PP D09-02	M	for faculty orientation and training procedures
03	M	for scheduling procedures
04	E	for student personnel services
05	E	for survey and evaluation of society and research findings procedures relevant to the program
06	E	for special studies procedures
07	E	for clinic procedures
09	E	for pre and post test procedures
10	E	for post phase test procedures
11	E	for interview procedures
12	E	for recruiting procedures
13	E	for screening procedures
14	E	for notification procedures
15	E	for orientation procedures
16	E	for evaluation of faculty orientation and training
17	E	for evaluation of scheduling procedures
18	E	for evaluation of student personnel services
19	E	for evaluation of survey and evaluation of society and research findings relevant to the program
20	E	for evaluation of PMs and learning materials
21	E	for evaluation of facilities, equipment, materials
22	E	for evaluation of personnel
23	E	for evaluation of management system
24	E	for evaluation of special studies
39	E	for evaluation of clinic
40	E	for evaluation of PM sequence and organization

41	E	for evaluation of candidate clinical performance
42	E	for evaluation of pre and post test
43	E	for evaluation of post phase test
44	E	for evaluation of interview
45	E	for evaluation of recruiting
46	E	for evaluation of screening
47	E	for evaluation of notification
48	E	for evaluation of group performance
49	E	for evaluation of individual accumulative performance
50	E	for evaluation of PM block performance
51	E	for evaluation of teaching performance and "Other Criterion Measures"
52	E	for evaluation of progress
53	E	for evaluation of product
54	E	for evaluation of overall model program
55	M	for "use of portal schools" procedures
56	M	for reciprocal agreements procedures
57	E	for student progress procedures
58	E	for candidate orientation evaluation
59	E	for revision evaluation procedures
60	E	for use of portal schools evaluation procedures
61	E	for reciprocal agreements evaluation procedures
10-01	M	Design simulation model for operational phase of model program
11-01	M	Program simulation model for operational phase of model program
		Design and draft:

PART TWO

Part Two

PERT Time (Network Processor)

This part of the volume presents the technical aspects of IBM Project Management System/360 (PMS/360) (IBM, 1968) as applied in the feasibility study of the model educational program. Section A of this part discusses the input data for PMS/360 while Section B presents three activity time status reports for the five year development strategy.

Section A: PERT Time Data

PERT time data falls into three broad categories: job control language, activity time cards and time calendar. Following is a brief description of the PERT time data presented in this section.

Job Control Language for Network Processor

The job control language cards are the control cards of the operating system of the 360 computer. They contain information such as whether the master files are to be on tape or disk, and how the time intermediate data set is to be formulated. This information is normally fixed when the computer is installed and PMs is run for the first time. Pages 65 through 69 illustrate the job control language cards used in the network processor for the PERT data presented in this volume. A few of these cards contain options such as whether or not the input data or the calendar are to be printed. These cards are the bridge between the operating system and PMs which transfer control from one system to the other. A more complete description of the various types of job control language cards is provided by IBM (1968, pp. 339-73).

Activity Time Cards

This section contains a brief description of the input cards for the PERT network processor module. A complete listing of the PERT time data is found on pages 70 through 132 of this volume. There are a total of seven types of data cards listed in the data input and each is identified by a two-digit number (the first two digits of each card). The input order for these cards is shown in Figure 10.

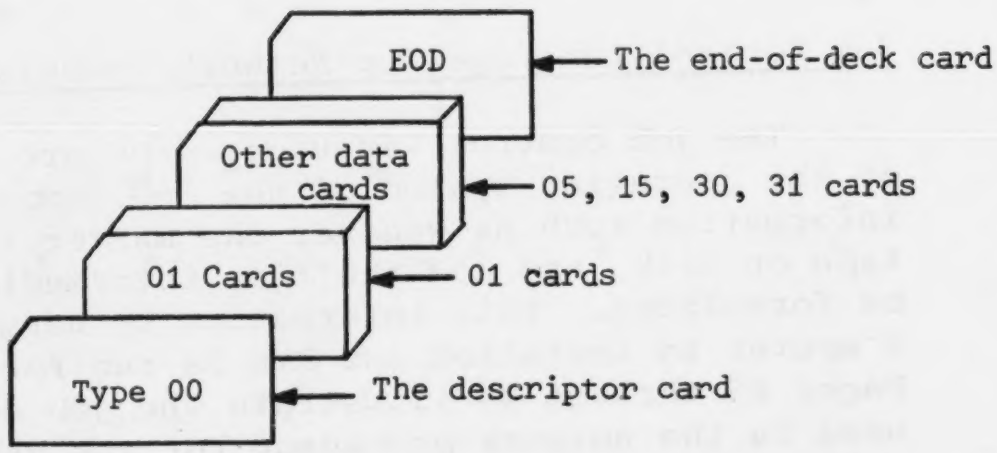

Fig.10. The order of input for PMS data cards for network processor.

Type 00. The descriptor. This card controls the length of fields for descriptions, departments, event names, etc. and where they are to appear on the cards. Information on these items is obligatory.

Type 01. Dictionary card. This obligatory card provides information on the logical relationship of the networks and subnets which contain the input data. All networks and subnets mentioned on data cards are defined by the type 01 cards; otherwise the cards will not be put into the system. These cards enable the user to delete complete networks or subnets from the old master file. These cards are always required unless only the calendar is being updated.

Type 05. Calendar card. This card controls the network processor calendar which is produced by the program used in calculating results. As long as there is a calendar on the master file, this card is optional.

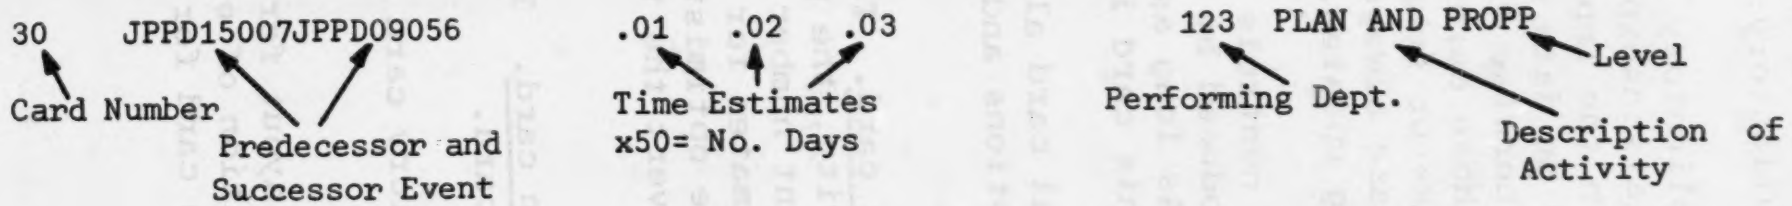
Type 15. Subnet card. This optional card allows the addition or modification of descriptions and data dates of any subnet.

Type 30. Activity and special event card. This card contains a description of an activity, the predecessor event number, the successor event number, the department number and three time estimates for the event. The times given in order are the optimistic, most likely and pessimistic. To convert the times to days multiply by 50.

Type 31. Activity/event continuation card. This card is a continuation for the type 30 card.

EOD. End-of-deck card. This obligatory card comes last and marks the end of the data cards.

Figure 11 shows a typical card layout for card type number 30 and 31 with a brief explanation of each field. Card type number 31 is a continuation card for card type number 30.



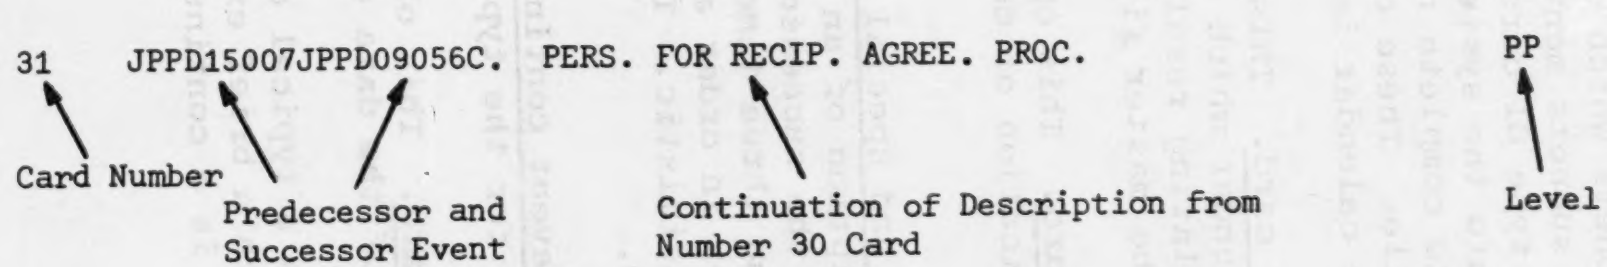


Fig. 11 Example of card layout for number 30 and 31 cards for network processor.

Time Calendar

A time calendar for the project has been prepared by a sub-routine of the network processor. This time calendar covers an eleven year period, January 1, 1970 through December 31, 1980. This indicates the year in which the project is scheduled to start and is extended through 1980 only for convenience in projecting project operations beyond the target completion date of 1976 for complete development and beginning of sustained operation for all phases of the model program. An asterisk indicates an eight hour workday while blank spaces and the letter "H" indicates non-workdays (Saturday, Sunday and holidays). This calendar has been developed based on the projected work schedule of the University of Georgia.

12223 ACTIVITIES GO INTO START EVENT
IPPD01001 IN OM

Section B: Activity Time Status Reports

The activity time status reports are listings of the acceptable activities in the specified PERT networks and subnets. Each activity is printed on a separate line, containing such information as the predecessor and successor events of the activity, its description, and time and scheduling information. The output from the activity time status reports may be sorted in any desired combination of the fields described below. For purposes of this report three activity time status reports are presented. These are sorted by: predecessor-successor events, expected date and slack (critical path list). Each page of the various reports is headed by information that describes the requested networks and subnets. Below the page headings are printed the appropriate column (field) headings, followed by a detailed listing of the activities. Following is a brief description of the salient features of each field description. The headings are common to all three activity time status reports.

Pred. Event. The predecessor or preceding event number for the activity described.

Succ. Event. The succeeding event number for the activity described.

Cycle Code. An "S" indicates that the succeeding event for this line data is a start event: "E" indicates that the preceding event is an end event and "I" indicates an interface event. All other letters are used to make the activities unique when more than one activity occurs between two events.

Activity Description. Brief description of the activity.

Time Estimates. The optimistic (A), most likely (M) and pessimistic (B) time estimates are given for the activity. To convert to days multiply each value by 50.

Slack. The primary slack is calculated on the basis of the latest allowed date minus expected date and is in the same units as the time estimates. This project has no secondary slack in any activity.

Completion Dates. The expected and latest allowed completion dates are given for the activity. If a date is preceded by an "A" flag, then the activity ending in the successor event is an actual activity.

Dept. The department number, as entered in the department field of the activity card. A more complete description of each department number is contained in Volume IIB of this report.

PREFACE

This is the second volume of the final report of the feasibility study. The titles of the volumes in order are:

Volume I	Basic Report
Volume II	Technical Report
Volume III	Job Descriptions

The technical report is designed for readers who wish to extend beyond the basic report into a more detailed analysis of the feasibility study activities and findings. Contained herein are the detailed PERT charts for the five year development strategy and input data and output reports for the IBM Project Management System/360 used in this study. For convenience in handling, the initial edition was divided into two parts whose pages are numbered consecutively. Volume IIA presents the PERT charts, activity lists, and the time data and time reports. Volume IIB presents cost data and reports.

Although all members of the investigating staff made contributions to the preparation of this volume, primary acknowledgement for the preparation of the technical material is directed to Mr. Jim B. Grant and Mr. Gunter Zietlow, Systems Engineers. Acknowledgement for organization of the volume and much of the descriptive information is directed to Dr. Jerry B. Ayers, Associate Director for Organization and Management. Other contributors were: Dr. Jerold P. Bauch, Associate Director for Evaluation, Dr. Michael L. Hawkins, Associate Director for Instruction, Dr. Charles E. Johnson, Project Director and Dr. Gilbert F. Shearron, Director of Implementation, and Chairman, Division of Elementary Education.

PART THREE

Part Three

PERT Cost (Cost Processor)

This part of the volume presents the technical aspects of the cost processor of PMS/360 as applied to the feasibility study of the model educational program. Section A of this part discusses the input data for PMS/360, while Section B presents several PERT cost reports for the five year development strategy.

Section A: PERT Cost Data

This section presents the data that is necessary for the computation of PERT cost data. This data falls into five broad categories: job control language, work breakdown structure, organization analysis table, cost categories and activity cost cards. Following is a brief description of the PERT cost data presented in this section.

Job Control Language for Cost Processor

The job control language cards are the control cards of the operating system of the 360 computer. They contain information such as whether the master files are to be on tape or disk, and how the cost intermediate data set is to be formulated. This information is normally fixed when the computer is installed and PMS is run for the first time. The job control language cards used in the cost processor of the PERT Cost data are presented in the following section. A few of these cards contain options such as whether or not the input data or the calendar are to be printed. These cards are the bridge between the operating system and PMS which transfer control from one system to the other. A more complete description of the various types of job control language cards is provided by IBM (1968, pp. 339-470).

Work Breakdown Structure

The base for the PMS/360 cost processor is the work breakdown structure or product analysis table. The work breakdown structure is defined as a pyramid subdivision

of the total project, beginning with the total program GEM and then subdividing the system into the work breakdown structure elements or overall levels, then phases and finally the activities. The activity or end item is the smallest level necessary to management and control or work. The work breakdown structure is a necessary factor in the account code structure and the cost processor. The work breakdown structure defines the work to be accomplished and establishes the relationships between the project and items and the project objectives, defines the framework for the construction of the PERT Time networks for depicting the overall project for a time and cost correlation, establishes the framework for integrating a cost system with the schedule planning and control system, and establishes a framework that is necessary for summarizing the cost and schedule status of the project's progressively higher levels of management.

The characteristics of the work breakdown structure include: the program considers "level 1" the highest level of summarization and it expects all charge number structures to begin at "level 1" and work down to the detail charge number; for any subnet or groups, cost may be centered at any level; and a charge number may summarize into one and only one number at any higher level. Figure 12 presents the work breakdown structure for the model program.

Level 1 is GEM or the total project, level 2 is the overall levels of management (PP=preparation level, PE= preprofessional level, PO=professional level, IN=inservice or specialist level and OM=overall management level), level 3 is the various phases of the project (D=development phase, T=piloting phase, I=initial operation phase and O=operation phase) and level 4 is the individual activities. Information from this chart is entered in the program by means of card type number 61 (see card type number 61 description that follows).

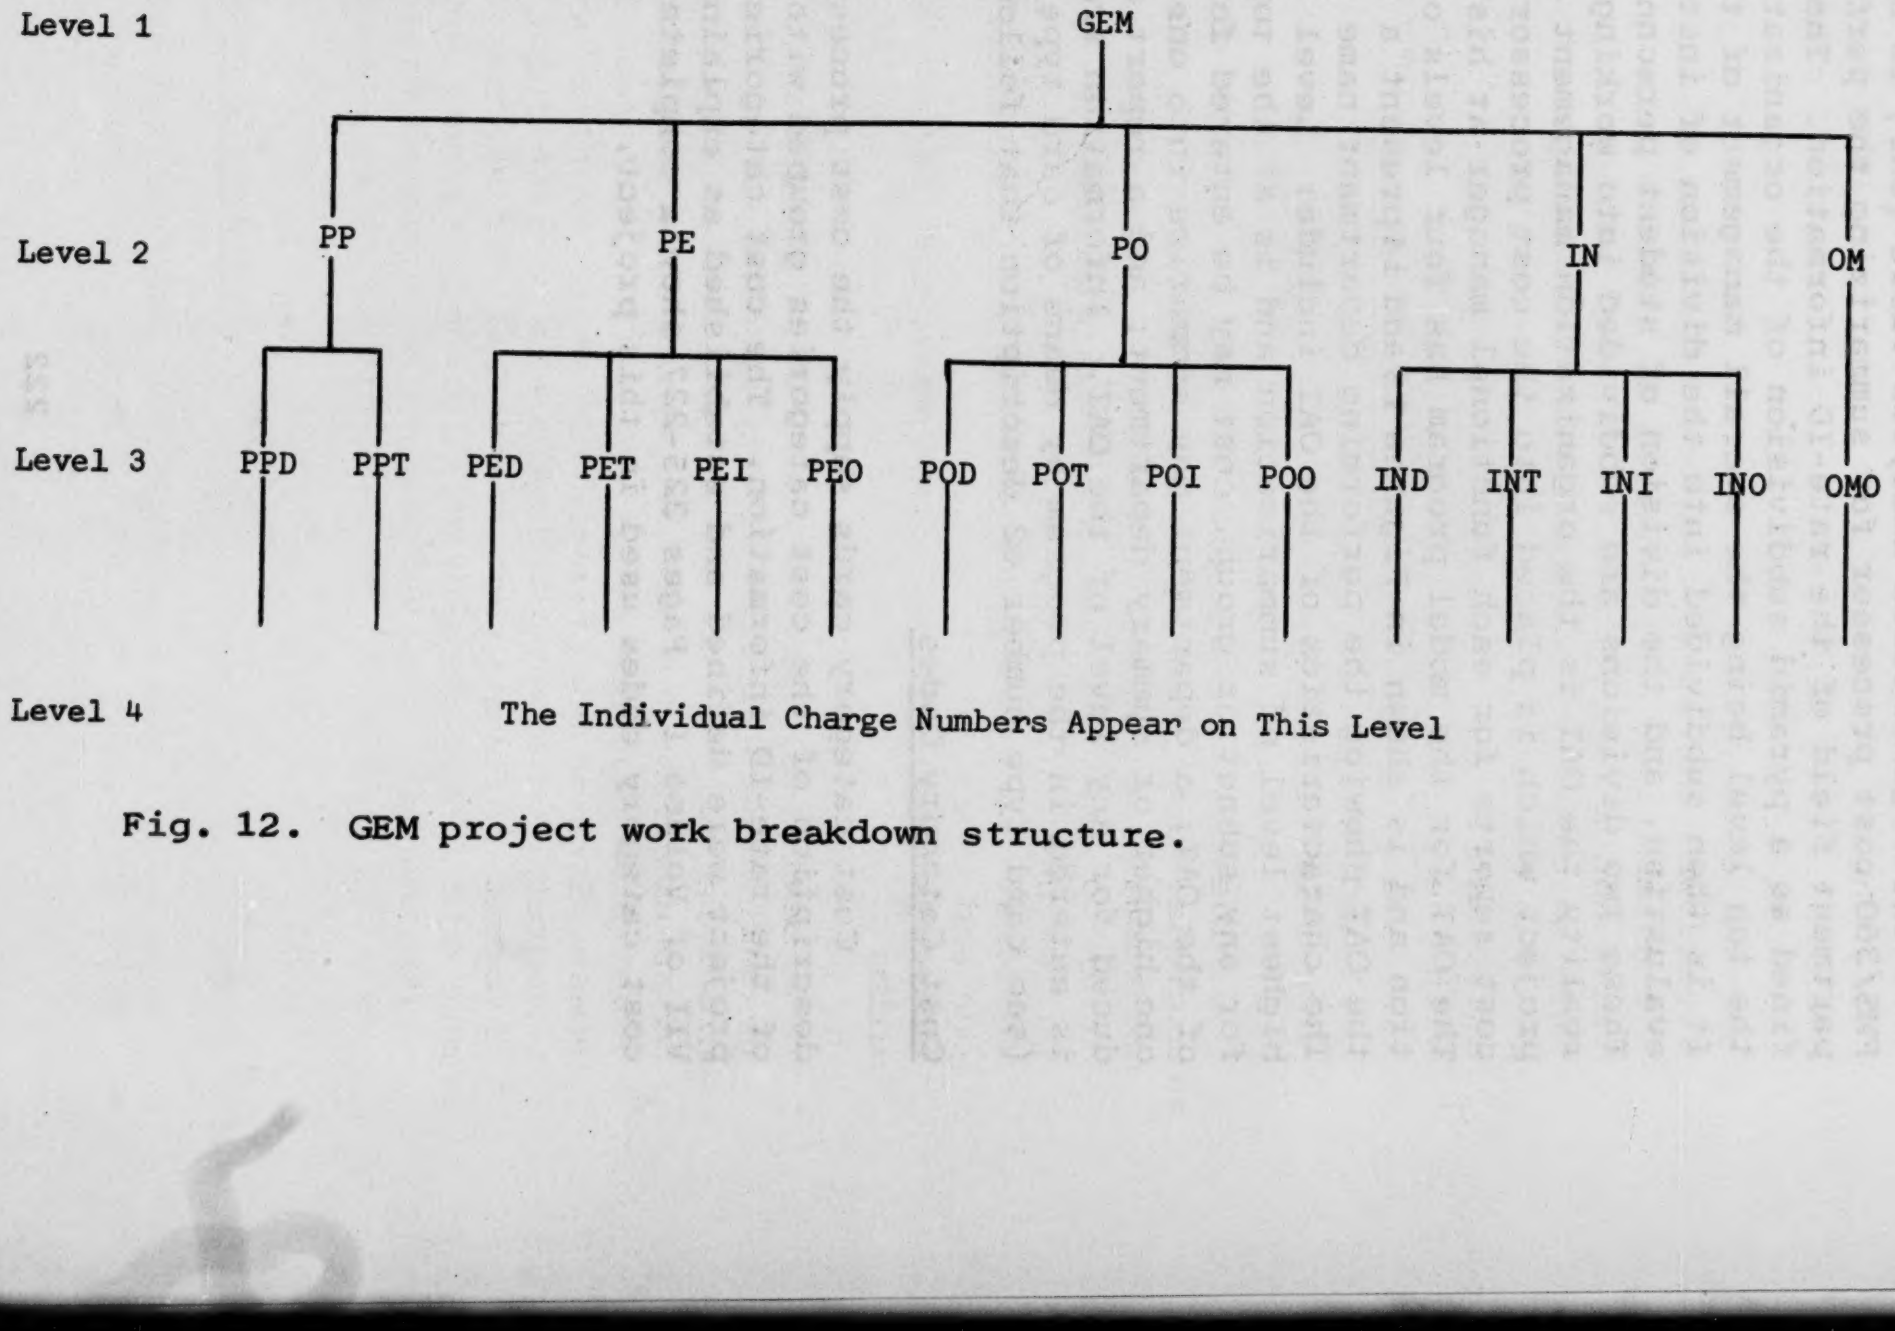

Fig. 12. GEM project work breakdown structure.

Organization Analysis Table

The organization analysis table (OAT) is basic in the PMS/360 cost processor for summarizing the performing department field of the rate-ID information. The OAT is defined as a pyramid subdivision of the organization, with the top level being the overall management of the project. It is then subdivided into the division of instruction and evaluation, and the division of student personnel services. These two divisions are subdivided into working levels. In reality the OAT is the organization management chart of the project which is placed into the cost processor to provide cost reports for each functional manager at his own level. The OAT for the model program has four levels of organization and is shown in Figures 13 and 14 present a summary of the OAT showing the performing department name and number. The characteristics of the OAT include: Level 1 is the highest level of summarization and is at the top of the OAT; for any subnet or group, cost may be entered for any level of the OAT; a department may summarize into one and only one higher or summary department; and a report may be produced for any level of the OAT. Information from this chart is entered in the program by means of card type number 62 (see card type number 62 description that follows).

Cost Category Codes

Cost category cards supply the cost processor with a description of the cost categories grouped within the limits of the rate-ID information. The cost categories for this project were defined and established as explained in Chapter VII of Volume I. Pages 225-227 show a complete list of the cost category codes used in this project.

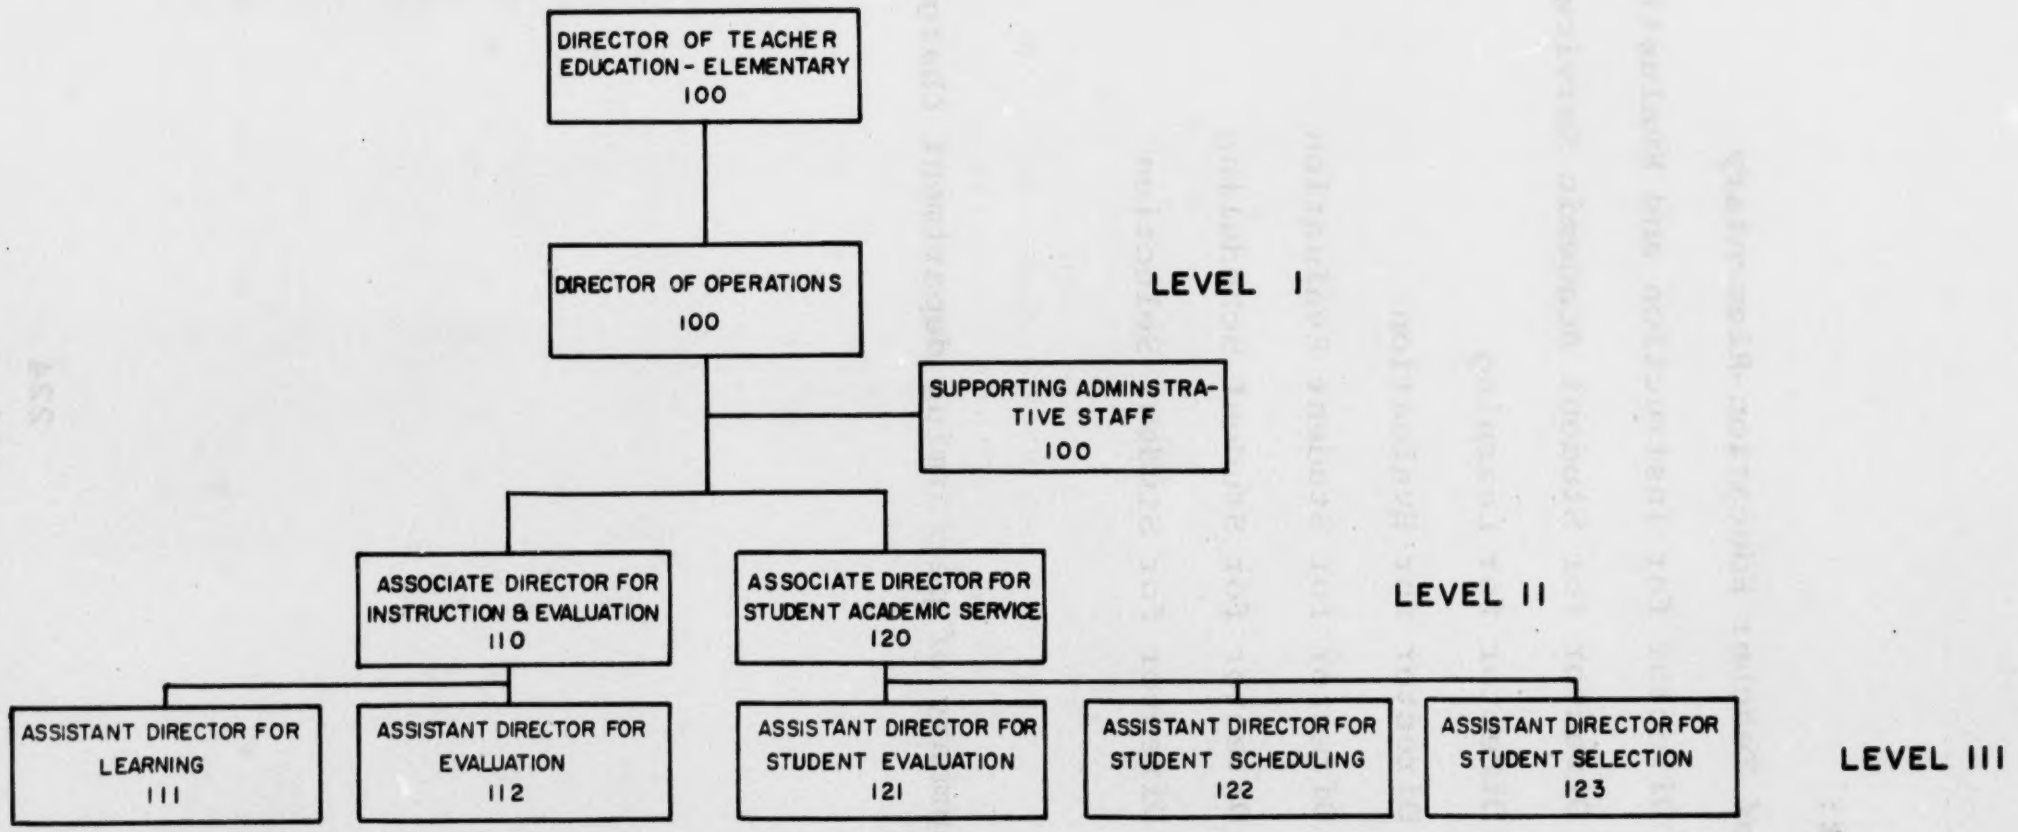

Fig. 13. GEM project organizational analysis table.

Department:	Number
Director of Teacher Education-Elementary	100
Associate Director for Instruction and Evaluation	110
Associate Director for Student Academic Services	120
Assistant Director for Learning	111
Assistant Director for Evaluation	112
Assistant Director for Student Evaluation	121
Assistant Director for Student Scheduling	122
Assistant Director for Student Selection	123

Fig. 14 Summary of performing department charge numbers.

Cost Category

1. PERSONNEL

1.1 Administrative

1.1.1 Program Manager

1.1.2 Assistant Program Manager

1.1.3 Administrative Assistant

1.1.4 Other (to be specified)

1.2 Instructional

1.2.1 Professor

1.2.2 Associate Professor

1.2.3 Assistant Professor

1.2.4 Instructor

1.2.5 Specialist

1.2.6 Instructional Assistant

1.2.7 Program Development Assistant

1.2.8 Clinicians

1.2.9 Other (to be specified)

1.3 Professional Service

1.3.1 Educational media specialists

1.3.2 Librarians

1.3.3 Computer programmers

1.3.4 Consultants (salary groups)

1.3.4.1 $300 a day
1.3.4.2 $200 a day
1.3.4.3 $100 a day
1.3.4.4 $ 50 a day

1.3.5 Production personnel (develop materials, transparencies, etc.)

1.3.6 Artists

1.3.7 Systems Specialist

1.4 Secretarial and Clerical Service

1.4.1 Executive secretaries

1.4.2 Secretaries, Bookkeeper

1.4.3 Cardpunch operators, Clerk-typists

1.4.4 Part-time clerical

2. ROOMS (normal equipment, supplies included)

2.1 office Executive office 200 sq.ft.

2.1.1 one man office 120 sq.ft.

2.1.2 two or more man office (specify number of persons) 220 sq.ft. (2 man office)

2.2 secretarial station 90 sq.ft.

2.3 classroom

2.3.1 15 students

2.3.2 25 students

2.3.3 50 students

2.3.4 75 students

2.3.5 100 students

2.3.6 250 students

2.5 Conference Room

2.5.1 15 people

2.5.2 30 people

2.5.3 50 people

2.5.4 100 people

2.6 Floor Space

2.6.1 25 sq.ft.

2.6.2 100 sq.ft.

2.6.3 50 sq.ft.

2.6.6 500 sq.ft.

3. EQUIPMENT AND MATERIALS

3.1 Equipment

3.2 Materials

3.3.1 Computers (CPU time)

3.3.2 Computers (overhead)

3.4.1 Study carrel

4. COMMUNICATIONS

4.1.1 Travel

4.1.2 Telephone

4.1.3 Professional laboratory expenses

Activity Cost Cards

This section contains a brief description of the input cards for the PERT cost processor. A complete listing of the PERT cost data is found in the following pages. There are a total of nine types of data cards listed in the data input and each is identified by a two-digit number (the first two digits of each card). The input order for these cards is shown in Figure 15.

Type 50. Cost descriptor. This card is used to identify and establish the size of the variable fields of data and the starting position of each field of data for the cost data input card. Information on these items is obligatory.

Type 55. Standard calendar card. The standard calendar card is used to build a Georgia calendar with a span of eleven years. The format is identical with that of the 05 card in the network processor except for the card type numbers in card columns 1 and 2. In PERT cost applications, the standard calendar card must agree with the one in the network processor application.

Type 60. Accounting calendar cards. These cards are used with each processing of the cost system to generate an accounting calendar that corresponds to the standard calendar. In this application of PMS the beginning of each accounting period corresponds to the first work day of the year.

Type 61. Work breakdown structure card. See previous section for discussion of work breakdown structure. This card contains the card type number and describes the cost level, charge number summary cost level, summary charge number and performing department, for each activity (see Figure 16).

Type 62. Organization analysis table (OAT) card. See previous section for discussion of organization analysis table. This card contains the card type number and describes the OAT level, the performing department, the OAT summary level, and the summary performing department (See Figure 16).

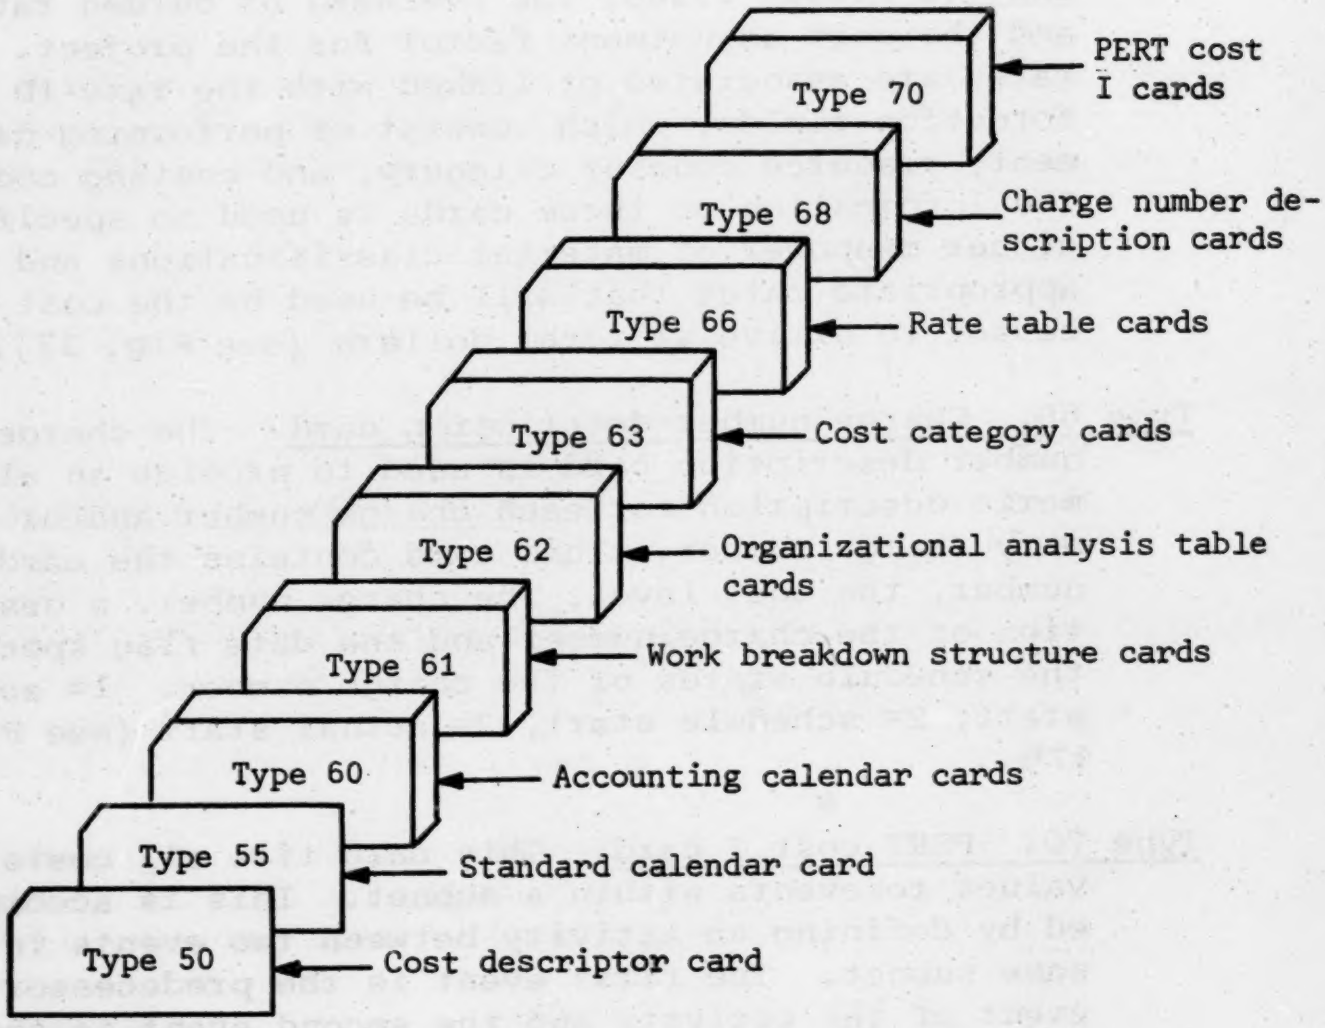

Fig.15. The order of input for PMS data cards for cost processor.

Type 63. Cost category card. See previous section for discussion of cost categories (activity resource code). This card contains the card type number and describes the sequence number for the identification of the rate-ID combinations to a specific cost category, the description of each cost category, the rate-ID combination, the performing department, the resource code or category and the costing code (see Fig. 16).

Type 66. Rate table card. The rate table contains the unit or direct rates, the overhead or burden rates, and the unit adjustment factor for the project. These rates are associated or linked with the rate-ID information fields, which consist of performing department, resource code or category, and costing code. The information on these cards is used to specify either manpower or material classifications and the appropriate rates that will be used by the cost processor to arrive at total dollars (see Fig. 17).

Type 68. Charge number description card. The charge number description card is used to provide an alphameric description for each charge number and/or summary charge number. This card contains the card number, the cost level, the charge number, a description of the charge number and the date flag specifying the schedule status of the charge number. 1= actual start, 2= schedule start, 3= actual start (see Figure 17).

Type 70. PERT cost I card. This card ties all costs or values to events within a subnet. This is accomplished by defining an activity between two events in the same subnet. The first event is the predecessor event of the activity and the second event is the successor event (see Fig. 17).

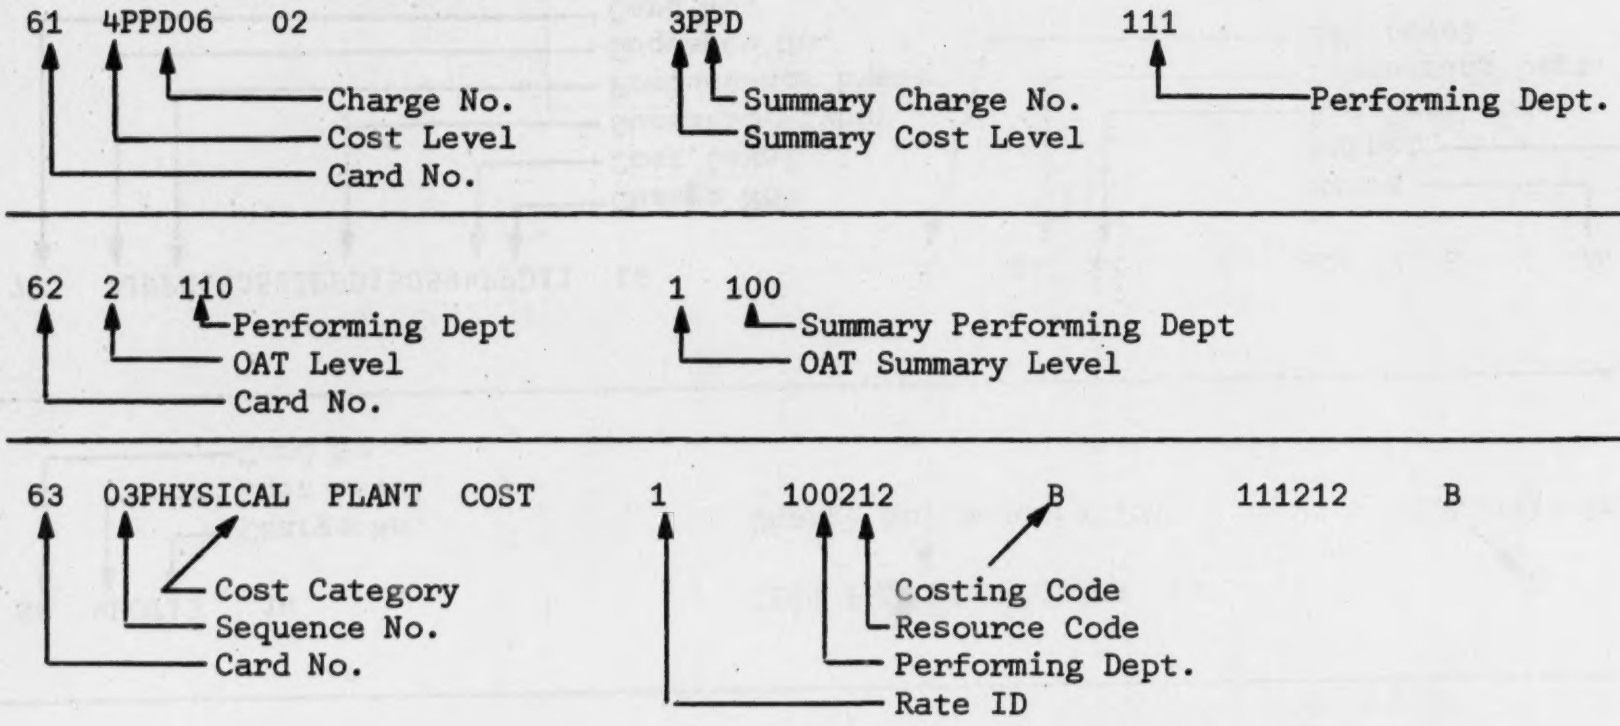

Fig. 16. Example of card layout for number 61, 62 and 63 cards for cost processor.

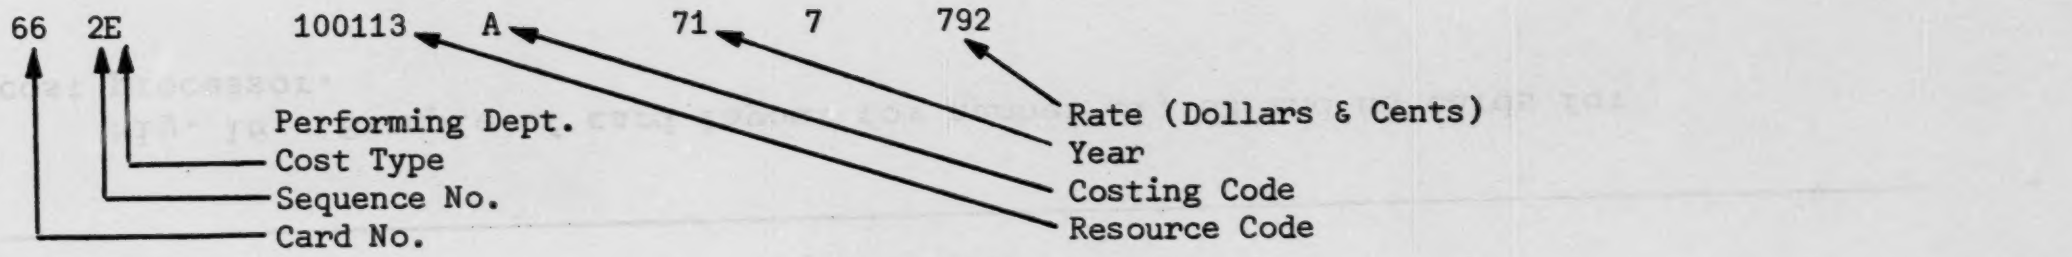

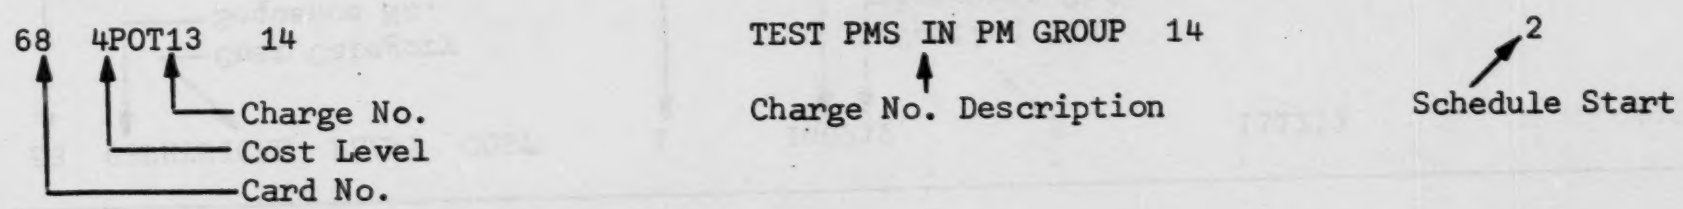

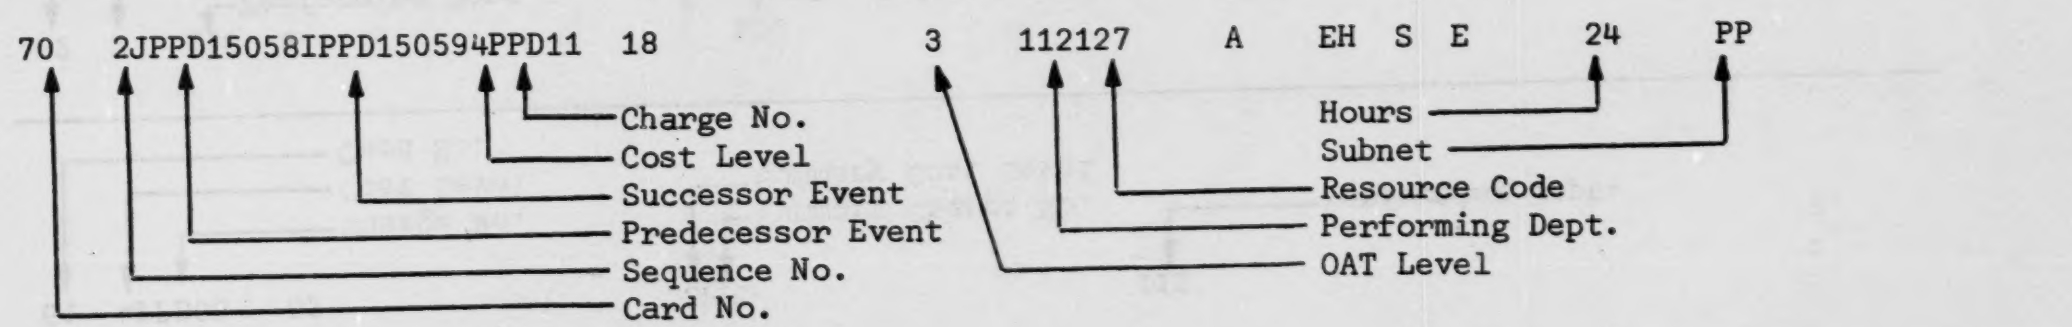

Fig. 17. Example of card layout for number 66, 68 and 69 cards for cost processor.

Section B: PERT Cost Reports

This section presents four PERT cost reports for the model program. These reports provide the financial data for the five year development and operation of the model program. The first report, presents cost data for the physical facilities while the remaining three reports present financial data for all other resources by responsible organization, by performing organization and by accounting period.

In all reports direct cost refers to total dollar cost of the activity. Within an activity it is the sum of the product of resource hours times cost per hour plus resources applied in total dollars. The direct cost is equal to total cost due to the fact that costs which might have been referred to as indirect costs were included in the computations of rates in the rate table.

The financial data on each report is presented as a revised estimate rather than a planned cost. As a result projected (overrun) underrun figures are given. These should be disregarded throughout these reports. All cost data for individual activities have been rounded to the nearest thousand dollars. However, totals given for the various reports are actual values rounded to the nearest thousand dollars. All cost are applied in the reports by charge number. These charge numbers correspond to activities on the PERT network diagrams and activity list found on pages 1 through 56 of this volume. The cost reports presented reflect only partial capability of PMS/360 report processor. Many of the entry spaces on the reports have not been used in this pass. These are to be used during operation of the management system. At that time the reports will reflect a comparison of actual cost through time periods compared to these estimates. Thus, these reports will eventually provide for even greater utilization than is shown here.

ORGANIZATION STATUS REPORT BY

PERFORMING ORGANIZATION

AND CHARGE NUMBER

FOR FACILITIES

The following report presents the man-hours usage and direct-cost for facilities for the development and operation of the model program for each of the five subnets (PP, PE, PO, IN and OM). The report is sorted according to performing organization and charge number within the performing organization. Following is a brief description of the salient features of this report.

Charge Number. Charge number which corresponds to an activity or activities for which facilities cost have been computed.

Perf. Orgn. The department or organization which performs the work as indicated on the COST I (No. 70) cards.

Man-hours. All data entered into the program in this field represent man-hour usage of facilities. No totals are printed for the man-hours field. Man-hours in excess of one million print as XXX, XXX.

Projected (Overrun) Underrun. This field should be disregarded in this report. Projected (Overrun) underrun is the result of the computation, planned - latest revised estimate.

Latest Revised Estimate. Estimated costs of facilities. Cost are rounded to the nearest $1,000.

Projected (Overrun) Underrun. This field should be disregarded in this report. Projected (overrun) underrun is the result of the computation, planned - latest revised estimate.

Most Critical Slack, (weeks). The greatest negative or minimum positive slack, resulting from the computation (latest - expected completion times) with respect to the end points of the various PERT time activities tied to the charge number reported.

ORGANIZATION STATUS REPORT BY RESPONSIBLE

ORGANIZATION, CHARGE NUMBER,

PERFORMING ORGANIZATION

AND RESOURCE CODE

FOR RESOURCES

The following report presents the man-hours and direct-cost for resources for the development and operation of the model program for each of the five subnets (PP, PE, IN and OM). The report is sorted according to performing organization and charge number within the performing organization. Following is a brief description of the salient features of this report.

Charge Number. Charge number which corresponds to an activity or activities for which resource costs have been computed.

Perf. Orgn. The department or organization which performs the work as indicated on the COST I cards.

Res. Code. The code for a particular manpower skill or material type for the cost reported, as specified in the COST I cards.

Man-hours. All data entered into the program in this field represent man and resource hours needed to complete the activity. No totals are printed for the man-hours field. Man-hours in excess of one million print as XXX, XXX.

Projected (Overrun) Underrun. This field should be disregarded in this report. Projected (Overrun) underrun is the result of the computation, planned - latest revised estimate.

Latest Revised Estimate. Estimated cost of resources for activity. Cost are rounded to the nearest $1,000.

Project (Overrun) Underrun. This field should be disregarded in this report. Projected (overrun) underrun is the result of the computation, planned - latest revised estimate.

Most Critical Slack, (weeks). The greatest negative or minimum positive slack, resulting from the computation (latest - expected completion times) with respect to the end points of the various PERT time activities tied to the charge number reports.

FINANCIAL PLAN AND STATUS BY

ACCOUNTING PERIOD AND BY CHARGE NUMBER

FOR RESOURCES

The following report presents the man-hours and direct-cost for resources for the development and operation of the model program for each of the five subnets (PP, PE, PO, IN and OM). The report is sorted according to performing organization and charge number within the performing organization. Following is a brief description of the salient features of this report.

Charge Number. Charge number which corresponds to an activity or activities for which resource costs have been computed.

Perf. Orgn. The department or organization which performs the work as indicated on the COST I (No. 70) cards.

Man-hours. All data entered into the program in this field represent man and resource hours needed to complete the activity. No totals are printed for the man-hours field. Man-hours in excess of one million print as XXX, XXX.

Projected (Overrun) Underrun. This field should be disregarded in this report. Projected (overrun) underrun is the result of the computation, planned - latest revised estimate.

Latest Revised Estimate. Estimated cost of resources for activity. Cost are rounded to the nearest $1,000.

Project (Overrun) Underrun. This field should be disregarded in this report. Projected (overrun) underrun is the result of the computation, planned - latest revised estimate.

Most Critical Slack, (weeks). The greatest negative or minimum positive slack, resulting from the computation (latest - expected completion times) with respect to the end points of the various PERT time activities tied to the charge number reports.

ORGANIZATION STATUS REPORT

BY PERFORMING ORGANIZATION AND CHARGE NUMBER

FOR RESOURCES

The following report presents a financial plan by yearly accounting periods for resources. Cumulative costs are shown for each charge number at the requested summary level. Only charge numbers active in a particular accounting period are reported. Following is a brief description of the salient features of this report.

Acct'g. Period. Date of beginning of yearly accounting period. It should be noted that the first accounting period only extends from July 1, 1970 through December 31, 1970.

Charge Number. Charge number which corresponds to an activity or activities for which resource cost have been computed.

Latest Revised Est. Estimate of cost for the indicated charge number to the nearest thousand dollars for the accounting period shown.

(Over) Under Plan. This field should be disregarded in this report. This field presents an estimate of the over or under estimate of the cost for this activity.
